

Subject card

Subject name and code	Protection Systems in the Industry, PG_00038323						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies	Subject group			Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marcin Śliwiński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	0.0	10.0	0.0	0.0	20
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		10.0		45.0	75
Subject objectives	To acquaint the students with methods for the analysis and design of the protection systems in industry.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U08] has the necessary preparation to work in an industrial environment, carry out research, apply principles of health and safety at work						
[K7_W09] has knowledge of typical security systems in industrial settings, knows methods of identification and design of protection systems in accordance with the methodology of functional security, has knowledge of information security		Student has knowledge concerning hazards identification, and defining of protection functions to be implemented in industrial control system (ICS) according to the functional safety concept (IEC 61508) and relevant sector standards, with regard cybersecurity aspects (IEC 62443).		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge			
Subject contents	Examples of protection systems in various industrial sectors. Advanced methods of reliability and safety analysis of technical systems. Failure mechanisms of elements in protecting systems and models. Failure modes, effect and criticality analysis (FMECA) of programmable systems. Advanced dependability analysis of complex systems using different methods: reliability block diagrams (RDB), fault trees (FT), event trees (ET) and Markov graphs (MG). Optimising of dependability. Requirements of PN-EN 61508 standard and its relations with sector standards PN-EN 61511 and PN-EN 62061. Individual risk and societal risk. Hazards identifying, risk analysis and assessment. Objectives and concepts of functional safety management in life cycle. Analysis of industrial installations using HAZOP methodology. Defining of safety-related functions. Defining of accident scenarios. Determining required safety integrity level based on risk analysis and assessment; risk matrix method. Security of computer networks. Architecture constrains in E/E/PE subsystems. Verifying SIL under uncertainty. Dependent failures and their eliminating. Layers of protection analysis (LOPA) in relation to PN-EN 61511. Human factors in functional safety and layers of protection analysis; functional analysis, designing of interfaces and the alarm system. Requirements concerning functional safety of machinery control systems according to PN-EN 62061. Testing strategy of E/E/PE systems.						
Prerequisites and co-requisites	Knowledge concerning the reliability analysis in technical systems, the programmable technologies and the computer systems in industry and economy.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test - theory/problems I	60.0%	50.0%
	3 reports	60.0%	50.0%
