GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Aspects of implementation and certification of medical products, PG_00053349		
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering		
Date of commencement of studies	February 2025	Academic year of realisation of subject	2025/2026
Education level	second-cycle studies	Subject group	Optional subject group Specialty subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish polski
Semester of study	3	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Jerzy Wtorek	
	Teachers	prof. dr hab. inż. Jerzy Wtorek	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	2.0	18.0	50

Subject objectives	The subject introduces aspects of the tasks for a potential designer and manufacturer resulting from the regulations regarding the implementation and placing on the market of medical equipment.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U71] is able to apply knowledge from humanistic, social, economic or legal sciences in order to solve problems	The student is able to design clinical trials taking into account the aspect of their credibility, taking into account the actual conditions occurring during these trials. The student is able to select legal requirements relating to the certification process.	[SU4] Assessment of ability to use methods and tools
[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	Based on the knowledge obtained, the student knows and understands the principles and requirements for the correct process of designing, implementing, putting into service and monitoring a medical device.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K7_W11] knows and understands, to an increased extent, the general principles of creation and development of forms of individual entrepreneurship and the economic, legal and other conditions of various types of activities related to the awarded qualification, including the principles of protection of industrial property and copyright law	The student knows the regulations governing the admission of medical products to the market and the related requirements for the design, production and quality assurance management system.	[SW1] Assessment of factual knowledge
[K7_K71] is able to explain the need to apply knowledge from humanistic, social, economic or legal sciences in order to function in a social environment	Based on the acquired knowledge, the student understands the need to conduct properly designed clinical and market research and the need to use management systems that take into account appropriate legal regulations.	[SK5] Assessment of ability to solve problems that arise in practice

Subject contents

1. Discussion of the design, implementation and certification cycle of a medical product.2. Importance and basic requirements for the prototype, MVP and final product.3. Certification process.4. Clinical trials at various stages of product development.5. Designing clinical trials.6. Market research and obtaining funds for various stages of medical product development.

Prerequisites and co-requisites

Basics of electronics, physics and statistical methods in medical applications

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
	55.0%	40.0%
umiejętności	55.0%	60.0%

Recommended reading

Basic literature	Medical Devices Regulation (MDR) ISO 14155 Clinical Investigation of Medical Device Methodology for the clinical development of medical devices, French National Authority for Health
