GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Optical Techniques in Medicine, PG_00053346		
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering		
Date of commencement of studies	February 2025	Academic year of realisation of subject	2025/2026
Education level	second-cycle studies	Subject group	Optional subject group Specialty subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Jerzy Pluciński	
	Teachers	dr hab. inż. Jerzy Pluciński	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	15.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	2.0	10.0	57

Subject objectives

The aim of the course is to obtain by the student the knowledge and skills in the field of means and methods using the achievements in optics in medicine, in particular in diagnostics and medical therapy.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W53] Knows and understands, to an increased extent, selected aspects of biomedical diagnostics.	He or she knows and understands selected aspects of using optical radiation in biomedical diagnostics, including, in particular, optical imaging methods (optical coherence tomography, photoacoustic tomography, etc.).	[SW1] Assessment of factual knowledge
[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	He or she knows and understands the structure and principle of operation of selected devices and devices using optical radiation in medicine, in particular in medical diagnostics and therapy.	[SW1] Assessment of factual knowledge
[K7_W02] knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	He or she knows and understands theories related to the propagation of optical radiation in free space and a material medium, the mechanisms of optical radiation influence on tissues, physical phenomena accompanying the propagation of optical radiation in tissues.	[SW1] Assessment of factual knowledge

Subject contents	1. Introduction. 2. Basic information on the knowledge of optics used in optical techniques in medicine. 3. Basic optical properties of tissues. 4. Methods of describing radiation propagation in tissues. 5. Phenomena and effects of the influence of optical radiation on tissues. 6. Safety standards related to the use of optical radiation sources. 7. Optical technical means used in medicine. 8. Physical basis of operation and parameters of optical radiation sources used in medicine, with particular emphasis on continuous and pulsed lasers. 9. Advantages of using lasers in medicine. 10. Optical detectors used in medicine. 11. Optical diagnostic systems. 12. Optical diagnostic methods.
Prerequisites and co-requisites	

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Exam	50.0%	60.0%
Laboratory exercises	50.0%	40.0%
