

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Supramolecular chem	nistry and medi	cine, PG_0005	3339					
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering								
Date of commencement of studies			Academic year of realisation of subject		2024/	2024/2025			
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of de	elivery		at the	at the university		
Year of study	1		Language	Language of instruction		Polish	Polish		
Semester of study	1		ECTS credits		3.0	3.0			
Learning profile	general academic pro	ofile	Assessmer	Assessment form		asses	assessment		
Conducting unit	Department of Chemi	stry and Techr	ology of Func	tional Materials	s -> Fac	ulty of	Chemistry		
Name and surname	Subject supervisor	-		wa Wagner-Wy		-			
of lecturer (lecturers)	Teachers			wa Wagner-W					
			drinż Rados						
			dr inż. Radosław Pomećko						
			dr hab. inż. Robert Tylingo						
			dr inż. Agata Sommer						
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	15.0	0.0	15.0	0.0		0.0	30	
	E-learning hours inclu	uded: 0.0							
Learning activity and number of study hours	Learning activity	Participation in classes includi plan				Self-study		SUM	
	Number of study hours	30		3.0		42.0		75	
Subject objectives	The aim of the course is to familiarize students with the broadly understood aspects of the interdisciplinary field of science - supramolecular chemistry - with particular emphasis on application areas in medicine and related sciences.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems		The student interprets the results of the obtained research, drawing constructive conclusions in relation to the data presented in the world literature			[SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work			
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science		Student is able to prepare a design concept illustrating the use of modern supramolecular chemistry in medicine			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task			
	[K7_W51] Knows and understands, to an increased extent, selected aspects of chemistry and biochemistry constituting general knowledge in the field of biomedical engineering.		Student defines concepts related to supramolecular chemistry and its applications which is part of the knowledge in the field of biomedical engineering - Student describes techniques and methods used in the field of biomedical engineering - using the achievements of modern supramolecular chemistry			[SW1] Assessment of factual knowledge			

wykładowych wykładowych Supplementary literature 1. Grzegorz Schroeder, Joanna Wyrwał: "Maszyny molekularne", SERIA: Chemia Supramolekularna, BETAGRAF Poznań 2004 Błażej Gierczyk, Joanna Kurczewska, Grzegorz Schroeder, "Pracownia z chemii supramolekularnej. Fizykochemia receptorów molekularnych", Poznań 2008 Materiały supramolekularne Praca zbiorowa pod redakcją Grzegorza Schroedera, BETAGRAF P.U.H. Poznań 2008							
1. Modification of bacterial cellulose for imparting antimicrobial properties. 2. Immobilization techniques of bioactive materials used in medicine - encapsulation polysaccharide-based hydrogel 3. Supramolecular interactions in constructing III generation dressings 4. Supramolecular polymers interactions used in 3D-bioprinting 5. Supramolecular analytical chemistry - applications in biomedical analysis Prerequisites and co-requisites Knowledge and skills (applies also to the practical part of the subject - laboratory) in the field of organic, analytical, physical chemistry, and biochemistry. Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade Performing of the laboratory classes and passing tests 51.0% 50.0% 50.0% It will no or call Subject passing criteria Passing threshold Percentage of the final grade Recommended reading 1. Jonathan W. Steed, David R. Turner, Karl Wallace: "Core Concepts in Supramolecular: Chemistry - Villey 2009 2. Sological inspiration to Biomedical Applications" Springer Science-Biological inspiration to Biomedical Applications" Springer Science-Biological inspiration to Biomedical Applications" Springer Science-Filer Stroket', Springer SterNA: Chemis Supramolecularies, Advanced Textbook", Springer SterNA: Chemis Supramolecularies, BETAGRAF Poznah, 2003 8. Applications Advanced Stroket, Springer SterNA: Chemis Suparamolecularies, BetaGRAF Poznah, 2003 8. Attuathe	Subject contents	substrate, receptor, host, guest. Types of interactions in supramolecular systems. Examples of synthetic host molecules, complexing compounds (podandss, coronands, cryptands, spherands, calixarenes, hetero- and homo-calixarenes, metalloporphyrins and others). The complexation of cations, anions and molecules. Effects: chelate, macrocyclic and cryptic. Pearson's theory of hard and soft acids and bases (HSAB). Strategy for the synthesis of macrocyclic compounds. Factors promoting cyclization (template effect, preorganization of substrate molecules, dilution method). Self-organization and molecular recognition. Chemistry of macromolecules (polymers), basic properties of macromolecules, types of polymerization reactions. Macrocyclic ligands: cyclodextrines and their complexes, dendrimers, cyclophanes and steroids. The phenomenon of preorganization, systems containing a large number of hydrogen bonds (rosettes, tapes - ribbons, fibers and two-dimensional networks, capsules with hydrogen bonds, gas hydrate clathrates). Supramolecular interactions exemplified with polysaccharide biopolymers (chemistry of chitosan, alginate, starch), protein biopolymers (collagen, fibrinogen). Self-organization of nucleic acids (DNA and RNA chemistry), types of supramolecular interactions occurring in biopolymers and the possible uses of these interactions. Intermediate systems between chemical molecules and cells of living organisms, lipid membranes, microemulsions, micelles, fibers, nanotubes, liquid crystals Examples of the application of supramolecular chemistry in the food and cosmetics industries. Supramolecular systems occurring in nature (biological systems) and their role; examples of natural complexing compounds (antibiotics, siderophores, etc.). Supramolecular biomimetic systems: enzymes, cells, channels. Applications of supramolecular chemistry in medicine: a) diagnostics - optical and fluorescent sensors, logic gates, electrochemical sensors, imaging systems; multifunctional nanoparticles b) therapeutics - chelate therapy,					
2. Immobilization techniques of bioactive materials used in medicine - encapsulation polysaccharide-based hydrogel 3. Supramolecular interactions in constructing III generation dressings 4. Supramolecular polymers interactions used in 3D-bioprinting 5. Supramolecular analytical chemistry - applications in biomedical analysis Prerequisites and co-requisites An or-requisites An dorder analytical chemistry, and biochemistry. 		eResources addresses	Adresy na platformie eNauczanie:				

Example issues/ example questions/ tasks being completed	Describe the basic relationships characteristic for guest-host chemistry.
	List and illustrate with examples the types of interactions in supramolecular systems (giving examples of sytems occurring in nature and synthetic ones).
	Discuss drug delivery and controlled release systems based on supramolecular interactions.
Work placement	Not applicable
