

## Subject card

Subject name and code	Machine Learning, PG_00053337						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jacek Rumiński				
	Teachers		mgr inż. Natalia Szarwińska				
			mgr inż. Szymon Zaporowski				
			prof. dr hab. inż. Jacek Rumiński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		26.0	75
Subject objectives	The aim of the course is to acquire knowledge and skills in the field of machine learning algorithms, data pre-processing methods as well as metrics and methods for the verification and validation of algorithms and models.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	The effect of the learning process is the student's acquisition of knowledge in the field of implementation or use of programming libraries regarding the practical application of machine learning algorithms, cost functions formulas, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics. or regression models in particular in biomedical applications, human safety, health prevention, etc.	[SW1] Assessment of factual knowledge
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	The effect of the learning process is the student acquiring the skills of practical application of machine learning algorithms, formulas in the field of cost functions, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics or regression models, in particular in biomedical applications. , personal safety, health prevention, etc.	[SU1] Assessment of task fulfilment
	[K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study	The effect of the learning process is the student gaining knowledge in the field of understanding the definition of machine learning algorithms, formulas in the field of cost functions, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics or regression models.	[SW1] Assessment of factual knowledge

Subject contents	Introduction to machine learning (what is machine learning, classifications of machine learning methods)		
	Methods of data acquisition and preparation: data cleansing, data transformation, data standardization and normalization		
	Methods of data acquisition and preparation: data integration and reduction		
	Methods of reducing multidimensionality (e.g. PCA, ICA, etc.)		
	Data representation methods for machine learning		
	The process of acquiring knowledge from data		
	Generalizing characteristics generation methods		
	Rule induction methods and rules evaluation parameters		
	Classification methods (introduction) and classification quality assessment methods (measures, etc.)		
	Supervised classification methods (decision trees, random forests)		
	Supervised classification methods (from Bayes to minimum-distance classification)		
	Supervised Classification (SVM) Methods,		
	Unsupervised classification methods (k-means, ISO-DATA, etc.)		
	Optimization methods - characteristics		
	Optimization methods - gradient methods		
	Linear Regression		
	Logistic regression		
	Artificial neural networks - introduction, perceptron, learning		
	Artificial neural networks - MLP, activation functions, learning part 1.		
	Artificial neural networks - MLP part 2.		
Prerequisites and co-requisites	- knows the basics of linear algebra, mathematical analysis and probability calculus with Bayes' theorem - knows the basics of software engineering (software life cycle, software design, testing, etc.). - knows the basics of data analysis methods - knows the basics of Python - can design and model object-oriented - can use databases		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	50.0%	50.0%
	Assignments	50.0%	10.0%
	Exam	50.0%	40.0%
