Subject objectives	Learning how to use selected features of the computer for mathematical purposes; specifically, acquiring the following abilities and knowledge: <ul style="list-style-type: none"><li>• creating mathematical formulas in office packages,</li><li>• using spreadsheets for conducting mathematical calculations (including VBA programming) and for data visualization in graphs and diagrams,</li><li>• using LaTeX for preparing mathematical documents, including presentations and posters,</li><li>• understanding the basics of encoding characters and numbers in the computer.</li></ul>						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_U07	The student uses spreadsheet software to solve practical problems. The student can expand the capabilities of a spreadsheet by programming additional functions in VBA, and knows the available data types.			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	K6_W08	The student understands the method used in the computers for binary encoding of characters and numbers (integers and reals).			[SW1] Assessment of factual knowledge		
	K6_U10	The student can create mathematical formulas using office software packages. The student is able to create LaTeX documents containing mathematical formulas.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
