

Subject card

Subject name and code	Mobile applications programming , PG_00060230						
Field of study	Technical Physics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Theoretical Physics and Quantum Computing -> Faculty of Applied Physics and Mathematics -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Paweł Syty				
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The aim of the course is to acquaint students with methods of creating mobile applications for Android system.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] analyzes and solves simple scientific and technical problems, based on possessed knowledge, using analytical, numerical, simulation and experimental methods		The student is able to use their knowledge to create a mobile application on a selected topic.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K6_U10] determines their own study field interests and develops them		The student is able to identify their interests related to their field of study and develop them in the context of mobile application programming.		[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		
	[K6_W05] has knowledge of programming methodology and techniques, and the use of selected IT tools in physics and technology		The student has knowledge related to methods, tools, and languages for programming mobile applications and is able to apply them in practice.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
Subject contents	Course content – lecture 1. Preliminary issues. Overview of operating systems (Android, iOS, Windows Phone/10, Symbian), intended for mobile devices. 2. General overview and presentation system. System architecture. The Kotlin programming language. 3. The development environment. Emulator system. ADB. 9. The process of application development. The first application. 4. Anatomy of applications. The use of the manifesto. 5. Resource management applications. Preparing applications in different languages and for different hardware configurations (tablets, smartphones, etc.). 6. User interface design. 7. Working with the SQLite database. 8. The use of notification, sound and vibration. Creating widgets. 9. Dissemination applications. 10. Discussion of sample applications. Course content – laboratory Familiarization with the programming environment (Android Studio). Selection of applications for implementation. Application design. Application implementation. Testing and evaluation of applications. Presentation of the code and functionality of the completed application.						

Prerequisites and co-requisites	The ability to object-oriented programming.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Evaluation of the work in the classroom	50.0%	50.0%
	Evaluation of final project	50.0%	50.0%
Recommended reading	Basic literature	Myles Bennett, Scalable Android Applications in Kotlin, BPB Publications 2024 Mounir Boussetta, Building Kotlin Applications, BPB Publications 2023	
	Supplementary literature	J. Horton, "Leraning JAVA by Building Android Games", PACKT, 2015	
	eResources addresses		
Example issues/ example questions/ tasks being completed	Lecture: Discuss the notification system in mobile applications.		
	Laboratory: Create a mobile application that performs simple mathematical/simulation/technical tasks.		
Practical activites within the subject	Not applicable		

Document generated electronically. Does not require a seal or signature.
