

## Subject card

Subject name and code	System Software, PG_00053912						
Field of study	Informatics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Computer Architecture -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Dziubich				
	Teachers		dr inż. Tomasz Dziubich				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	Understanding of low-level software develop process (OS services and drivers)						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U12] is able, to an advanced degree, to analyze the operation of components and systems related to the field of study, and to measure their parameters and study their technical characteristics, as well as to plan and carry out experiments related to the field of study, including measurements and computer simulations, and to interpret the obtained results and draw conclusions		The student implements a basic driver for a device, analysing its operation to an advanced degree. The student will use a debugger to verify parameter values and draw conclusions about the correct operation of the driver in a given operating system.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W03] knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		Student will become familiar with hardware support for operating systems (i.e memory management) and basic functions of moderns operating systems (file systems, multitasking, memory managme, cooperation with external devices).		[SW1] Assessment of factual knowledge		

Subject contents	1. Introduction 2. System software basis for control and management of the computer system 3. Generation of executable code: compilation, linking, loading direct and relocatable, static and dynamic libraries 4. Structure of compiled and linked files i 16- and 32-bit modes (public symbols, memory models) 5. Object and executable file formats (a.out, ELF, OMF, DOS EXE, COFF, NE, PE) 6. Low level processor mechanizms supporting OS developer 12. API as abstraction layer between application and operating system kernel, API as a virtual machine definition 13. API level structure, classifying of Win32 API functions, implementation with dynamic link libraries 14. Memory management problems, allocation and deallocation of memory, fragmentation, protecting 15. Structure of process memory (code, static data, stack, heap) 16. Chained file allocation method in MS Windows (file allocation table, directories) 17. Indexed file allocation method in Linux system (i-node, file handle tables); files and processes 18. Files reading and writing with API function in Linux and MS Windows systems 19. Directory search methods (opendir, readdir) 20. API functions process management, parent and child process 21. Multithreading processing with API functions ) 23. Signal and its properties, signal service, reliable and unreliable signals 24. Signal receiving technique 25. Peripheral drivers in Linux operating system 26. Peripheral drivers in MS Windows operating system (WDM)		
Prerequisites and co-requisites	knowledge of assembler and C language, computer architecture and concurrent processing		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	40.0%	50.0%
	Project	50.0%	50.0%
Recommended reading	Basic literature	M. Russinovich D. Solomon, A. Ionescu: Windows Internals: Including Windows Server 2008 and Windows Vista, 5th Ed. Microsoft Press, 2009 W. Oney: Programming the Microsoft Windows Driver Model, 2th Ed. Microsoft Press, 2002 R. Love: Linux Kernel Development, 3rd Ed., Addison-Wesley Professional, 2010	
	Supplementary literature	No requirements	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
