

Subject card

Subject name and code	Digital Documents, PG_00047982						
Field of study	Informatics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2027/2028		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Intelligent Interactive Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Bogdan Wiszniewski					
	Teachers	prof. dr hab. inż. Bogdan Wiszniewski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	<ol style="list-style-type: none"><li>1. Review basic concepts of modeling and implementation of digital and electronic documents.</li><li>2. Assess key standards and formats for representing documents in a computer-readable form.</li><li>3. Develop practical skills for developing document processing applications.</li></ol>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	Students have practical skills in designing and coding applications for processing document content and using supporting tools	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject
	[K6_W10] knows and understands to an advanced degree the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	Students understand the concepts of modeling and implementation of business processes using digital document exchange, as well as current standards for the specification and implementation of these processes.	[SW1] Assessment of factual knowledge
	[K6_W44] knows and understands, to an advanced extent, architecture, design principles and methods of hardware and software support for local and distributed information systems, including computing systems, databases, computer networks and information applications, as well as the principles of human-computer interaction, the operation and evaluation criteria of data processing, storage and transfer methods, including computational algorithms, artificial intelligence and data mining as well as standards and methods of IT systems administration, monitoring of processes and robustness to undesirable phenomena and activities	Students know the most important standards for identifying digital objects in dynamic distributed repositories.	[SW1] Assessment of factual knowledge
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Students understand the concepts of modeling and implementation of digital and electronic documents, and current standards for document representation in parsable form.	[SW1] Assessment of factual knowledge
Subject contents	1. Document engineering: data and process models 2. Document representation methods: structure and content 3. Binary formats for document presentation 4. PostScript - device independent print-page description 5. PDF - system independent document description format 6. RTF - document representation format for text processor interoperability 7. Tex/Latex - document assembly format; bibliography (BibTex), index, glossary 8. Document content transformation (XSL), tranclusion (XPath, Xpointer, XLink). 9. Document content internationalization; text coding systems 10. EbXML registry, collaboration protocol profile (CPP) and agreement (CPA) documents 11. JAVA/XML Data Binding tools (JAXB, XMLbeans) 12. XML schema languages 13. Workflow design patterns and description languages 14. Standard document architectures (eJustice, eGovernment, eHealth, eCommerce) 15. Identification of dynamic objects: PURL, URN, DOI, XRI.		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Activity/attendace	40.0%	10.0%
	final test	40.0%	30.0%
	Project	50.0%	60.0%
