

Subject card

Subject name and code	Non-Relational Databases, PG_00047966						
Field of study	Informatics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2027/2028		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		blended-learning		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Grzegorz Gołaszewski				
	Teachers		dr inż. Grzegorz Gołaszewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 15.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		51.0	100
Subject objectives	The main goal is to introduce theoretical issues of NoSQL databases. Moreover, three types of NoSQL databases are presented. After this course students should be acquainted with MongoDB, Redis and Neo4J.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	The student is able to assess the database design by checking the feasibility of queries.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K6_W44] knows and understands, to an advanced extent, architecture, design principles and methods of hardware and software support for local and distributed information systems, including computing systems, databases, computer networks and information applications, as well as the principles of human-computer interaction, the operation and evaluation criteria of data processing, storage and transfer methods, including computational algorithms, artificial intelligence and data mining as well as standards and methods of IT systems administration, monitoring of processes and robustness to undesirable phenomena and activities	The student is familiar with NoSQL data models: documents, graphs and key-value data structures. Additionally the student knows models of data distribution: sharding and replication, and CAP and BASE theories.	[SW1] Assessment of factual knowledge
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The student knows how to choose the appropriate database for specific business applications.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
Subject contents	1. Introduction to NoSQL databases <ul style="list-style-type: none"> types of NoSQL databases introduction to distributed databases CAP BASE 2. Document database - MongoDB 3. Key-value databases - Redis 4. Graph databases - Neo4J		
Prerequisites and co-requisites	1. Knowledge of relational modeling 2. Very good knowledge of SQL language 3. Knowledge of OLTP		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Workshop tasks	50.0%	80.0%
	Exam	50.0%	20.0%

Recommended reading	Basic literature	<p>1. Professional NoSQL, Shashanki Tiwari, Wiley, 2011.</p> <p>2. MongoDB, The Definitive Guide, Kristina Chodorow, O'Reilly, 2013</p> <p>3. Graph Databases: New Opportunities for Connected Data, Ian Robinson and Jim Webber, O'Reilly 2015.</p>
	Supplementary literature	Documentation of NoSQL databases.
	eResources addresses	<p>Adresy na platformie eNauczenie:</p> <p>Non-relational Databases 2024/2025 - Moodle ID: 39489</p> <p>https://enauczenie.pg.edu.pl/moodle/course/view.php?id=39489</p>
Example issues/ example questions/ tasks being completed	<p>1. Model NoSQL database (of any type)</p> <p>2. Define and execute queries</p> <p>3. Simulate distribution of data</p>	
Work placement	Not applicable	

Document generated electronically. Does not require a seal or signature.
