

Subject card

Subject name and code		Security of Computer Systems, PG_00047883						
Field of study		Informatics						
Date of commencement of studies		October 2024	Academic year of realisation of subject			2026/2027		
Education level		first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study		Full-time studies	Mode of delivery			at the university		
Year of study		3	Language of instruction			Polish		
Semester of study		6	ECTS credits			4.0		
Learning profile		general academic profile	Assessment form			assessment		
Conducting unit		Department Of Computer Architecture -> Faculty Of Electronics Telecommunications And Informatics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)		Subject supervisor		dr inż. Piotr Rajchowski				
		Teachers		dr inż. Piotr Rajchowski				
Lesson types and methods of instruction		Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
		Number of study hours	30.0	0.0	0.0	15.0	0.0	45
		E-learning hours included: 0.0						
Learning activity and number of study hours		Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
		Number of study hours	45	4.0		51.0	100	
Subject objectives		The aim of the course is to familiarize the student with the risk and security policy of computer systems at the same time learning about common cryptographic algorithms and security access methods to databases.						
Learning outcomes		Course outcome		Subject outcome		Method of verification		
		[K6_W03] knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		The student has knowledge about using cryptographic protocols, and how to secure information systems with public access. Student has knowledge about commonly described attacks on information systems.		[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
		[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices		The student has an ability of developing programs implementing the known cryptographic protocols and methods of database access. Student is able to describe and identify the way how to develop programs in the realities of the profession.		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation		
Subject contents		Threats, risk, security policies. Security policy design and planning. Risk analysis and Disaster Recovery Plans. Personell security management. Physical access control systems. Cryptographic techniques. Basic cryptographic algorithms. Cipher construction methods and modes of operation. One-way hash functions.. Authentication, identification, key exchange. Digital signature and PK certificates. Key management. Secure data transfer. Access control models. Operatin systems and application security. Advanced authentication symmetric, assymetric and hybrid protocols, identification and zero-knowledge protocols. Internet attacks. Socjal engineering methods of system penetration. Development of web security. SSL/TSL protocol. Firewalls. PKMobile systems security. Security standards and directives. Security assessment of IT systems. Security audit.						

Prerequisites and co-requisites	Basic programming skills and ability to work with databases		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	colloquium (2)	50.0%	60.0%
	Project implementation	50.0%	40.0%
