GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Calculus, PG_00045353
Field of study	Data Engineering

Date of commencement of studies	October 2024	Academic year of realisation of subject	2024/2025
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	English
Semester of study	1	ECTS credits	5.0
Learning profile	general academic profile	Assessment form	exam

Conducting unit	Faculty of Electronics, Telecommunications and Informatics

Name and surname of lecturer (lecturers)	Subject supervisor	dr Ewa Kozłowska-Walania
	Teachers	dr Ewa Kozłowska-Walania

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	45	13.0	67.0	125

Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and knowledge how to solve simple problems that are found in the field of engineering, in particular connected to data engineering.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U04] formulates logical solutions to complex or unstructured problems	Student is able to analyze a problem and choose, from the methods presented during the class, the tools necessary for its correct solution.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_W02] demonstrates advanced preparation in methods and techniques for formulating and solving problems	Student knows the main theorems, methods and tools presented during the lecture and knows how top use them.	[SW1] Assessment of factual knowledge

Subject contents	• Limits of functions. Asymptotes. Continuity.
	• Derivative of a function of one variable. Geometrical and physical interpretation. Basic differentiation formulas.
	• Product, quotient, and chain rules. Higher order derivatives. Information about partial derivatives.
	• Applications of differentiation. De LHospitals rule. The differential. Optimization. Concavity.
	• Indefinite integral. Basic formulas. Integration by parts, by substitution, by partial fraction decomposition, by trigonometric substitution.
	• Definite integral. Geometrical interpretation. Fundamental Theorem of Calculus.
	• Geometrical applications of definite integrals: areas, volumes, lengths.
	• Number series convergent and divergent. Criteria for convergence testing.
	• Power series. Radius and interval of convergence.
	• Taylor and McLaurin series. Differentitation and integration of power series.
	• Information about Fourier series.

Prerequisites and co-requisites	Completion of the Precalculus class

Assessment methods and criteria			
	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests	50.0%	40.0%
	Final Exam	40.0%	60.0%

	eResources addresses	Uzupełniające Adresy na platformie eNauczanie:

Example issues/ example questions/ tasks being completed	1. Find the local extrema and intervals of monotonicity of the function $f(x)=(\ln 2x)/x$
	2. Find the area between the x-axis and the curves $y=x\ln(x)$, $x=e$, and $x=e$.
	3. Find the volume of the solid obtained by rotating about the x-axis, the region bounded by $y=1/(x^2+2x+5)$.
	4. Determine the convergence of the series with terms given by $a_n= (2nn!) / (n^n)$.
	5. Using differentiation and integration of power series find the formula for the sum of $x^n / (n+1)$, and then use to evaluate the sum $1/((n+1)2^n)$
