

## Subject card

Subject name and code	Machine Learning Systems, PG_00058859						
Field of study	Informatics						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Intelligent Interactive Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jerzy Dembski				
	Teachers		dr inż. Jerzy Dembski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	15.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		47.0	100
Subject objectives	The skills in the data mining domain, object classification, genetic algorithms and reinforcement learning usage in optimal strategy searching.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can: - apply analytical, simulation and experimental methods, - notice their systemic and non-technical aspects, - make a preliminary economic assessment of suggested solutions and engineering work	The student models real systems to optimize their parameters using machine learning methods.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	The student has knowledge of theoretical foundations and with scope of construction and the use of Bayesian networks and decision trees, and also knows theoretical foundations and understands the operations of genetic algorithms genetic and reinforcement learning systems in multi-stage decision problems.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	The student has knowledge of theoretical foundations and with scope of construction and the use of Bayesian networks and decision trees, and also knows theoretical foundations and understands the operations of genetic algorithms genetic and reinforcement learning systems in multi-stage decision problems.	[SW1] Assessment of factual knowledge
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	The student models real systems to optimize their parameters using machine learning methods.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment
Subject contents	1. Introduction to Machine Learning 2. Decision trees - introduction (example, tree structure, terminology, notation, advantages and disadvantages) 3. Attribute selection criteria 4. Stopping criteria and pruning decision trees 5. Discretization of continuous attributes 6. Some problems with tree construction (missing attributes, large data sets) 7. Bayesian networks - introduction 8. Estimating the parameters of a bayesian network of a given structure 9. Learning the structure of a bayesian network 10. Clustering methods - introduction 11. K-means algorithm 12. Hierarchic clustering 13. Gaussian mixture model 14. Fuzzy c-means algorithm 15. Probabilistic clustering - COBWEB algorithm 16. Genetic algorithms - introduction 17. Coding methods 18. Advanced genetic search methods 19. Genetic based machine learning (GMBL) 20. Reinforcement learning in multistage decision processes - introduction 21. Exploitation and exploration 22. Markov decision processes 23. Time differences method with discrete and continuous representation		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Seminar	60.0%	20.0%
	Project	60.0%	20.0%
	Theoretical knowledge (lecture)	60.0%	40.0%
	Activity	0.0%	20.0%
