

## Subject card

Subject name and code	Communication Software for Internet of Things, PG_00063907							
Field of study	Informatics							
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026			
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1		Language of instruction		Polish			
Semester of study	2		ECTS cred	TS credits		3.0		
Learning profile	general academic profile		Assessme	ent form		exam		
Conducting unit	Department of Computer Communications -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Wojciech Gumiński					
	Teachers		dr inż. Wojciech Gumiński					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	5.0 0.0		45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		6.0		24.0		75
Subject objectives	The aim of the cours of designing and im				and pra	actical s	skills in the fie	eld of methods

Data wygenerowania: 22.11.2024 02:05 Strona 1 z 3

Learning outcomes	Course outcome	Subject outcome	Method of verification		
	[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can: - apply analytical, simulation and experimental methods, - notice their systemic and non-technical aspects, - make a preliminary economic assessment of suggested solutions and engineering work	Students describe the operation of communication protocols in the SDL language.	[SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task		
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Students implement unicast and multicast communication protocols using IPv4 and IPv6 protocols.	[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Students describe elements of the Internet of things architecture .	[SW1] Assessment of factual knowledge		
	[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	Student lists and describes the elements of SDL. Student lists the requirements for group communication.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
Subject contents					
	1. Introduction, IoT architecture 2. Definition of communication software 3. Introduction to the SDL language, basic features of the SDL language, graphic and text notations of elements of the SDL language 4. Model and structure of the SDL schema 5. Methods of describing the processes using SDL 6. Communication and data transmission between processes 7. Validation of protocols and compliance tests 8. Implementation of SDL projects using popular programming languages 9. Application of SDL notation on the design of an exemplary protocol 10. Use of communication sockets to implement network communication tasks 11. Methods of implementing network protocols using the idea of processes and mechanisms of communication between them 12. Methods of implementing mechanisms to preserve data integrity 13. Methods of implementing mechanisms for verification of compliance with a traffic contract 14. Implementation of security mechanisms for communication protocols 15. Postulates of group communication				
	8. Implementation of SDL projects u 9. Application of SDL notation on the 10. Use of communication sockets te 11. Methods of implementing network communication between them 12. Methods of implementing mecha 13. Methods of implementing mecha 14. Implementation of security mecha	sing popular programming languages design of an exemplary protocol of implement network communication of protocols using the idea of process unisms to preserve data integrity inisms for verification of compliance transms for communication protocols	tasks ses and mechanisms of with a traffic contract		
Prerequisites and co-requisites	8. Implementation of SDL projects u 9. Application of SDL notation on the 10. Use of communication sockets to 11. Methods of implementing network communication between them 12. Methods of implementing mecha 13. Methods of implementing mecha 14. Implementation of security mecha 15. Postulates of group communication	sing popular programming languages design of an exemplary protocol of implement network communication of k protocols using the idea of process unisms to preserve data integrity unisms for verification of compliance anisms for communication protocols ion	tasks ses and mechanisms of with a traffic contract		
and co-requisites Assessment methods	8. Implementation of SDL projects u 9. Application of SDL notation on the 10. Use of communication sockets to 11. Methods of implementing network communication between them 12. Methods of implementing mecha 13. Methods of implementing mecha 14. Implementation of security mech 15. Postulates of group communicat  Subject passing criteria	sing popular programming languages design of an exemplary protocol of implement network communication of protocols using the idea of process unisms to preserve data integrity unisms for verification of compliance transms for communication protocols ion	tasks ses and mechanisms of with a traffic contract  Percentage of the final grade		
and co-requisites	8. Implementation of SDL projects u 9. Application of SDL notation on the 10. Use of communication sockets to 11. Methods of implementing network communication between them 12. Methods of implementing mecha 13. Methods of implementing mecha 14. Implementation of security mech 15. Postulates of group communicat  Subject passing criteria  Test	sing popular programming languages design of an exemplary protocol of implement network communication is protocols using the idea of process thisms to preserve data integrity unisms for verification of compliance anisms for communication protocols ion  Passing threshold  50.0%	tasks ses and mechanisms of with a traffic contract  Percentage of the final grade 34.0%		
and co-requisites Assessment methods	8. Implementation of SDL projects u 9. Application of SDL notation on the 10. Use of communication sockets to 11. Methods of implementing network communication between them 12. Methods of implementing mecha 13. Methods of implementing mecha 14. Implementation of security mech 15. Postulates of group communicat  Subject passing criteria	sing popular programming languages design of an exemplary protocol of implement network communication of protocols using the idea of process unisms to preserve data integrity unisms for verification of compliance transms for communication protocols ion	tasks ses and mechanisms of with a traffic contract  Percentage of the final grade
