

Subject card

Subject name and code	Modelling the NET, PG_00048251						
Field of study	Informatics						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Manuszewski				
	Teachers		dr inż. Krzysztof Manuszewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		8.0		62.0	100
Subject objectives	An analysis of the social networks based on the graph model.						
	Implementation of the selected elements of a web search.						
	Implementation of some algorithms for clustering or categorization.Ability to apply hidden Markov models.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study		A student can develop and implement a simple search engine of online resources, including a web robot.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		The student gets acquainted with the models of communication on the Internet and its social aspects.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	Introduction to social networks		
	Web graph		
	Introduction to search engines		
	Analysis of the content of document		
	Information extraction, categorization and clustering		
	Link analysis		
	Modeling and understanding human behaviour on the Web		
	Hidden Markov models		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture	50.0%	100.0%
Recommended reading	Basic literature	P. Baldi, P. Frasconi, P. Smyth: Modeling the Internet and the Web, Wiley 2003. Mark Stamp, Revealing Introduction to Hidden Markov Models, Department of Computer Science, San Jose State University (2012) Andrew Y. Ng, Alice X. Zheng, Michael I. Jordan, Stable Algorithms for Link Analysis, Computer Science Division U.C. Berkeley
