

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	High Performance Machine Learning, PG_00063923							
Field of study	Informatics							
Date of commencement of studies	February 2025		Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies		Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction		Polish			
Semester of study	3		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Computer Architecture -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname	Subject supervisor		dr hab. inż. Paweł Czarnul					
of lecturer (lecturers)	Teachers		dr hab. inż. Paweł Czarnul					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in classes include plan	n didactic led in study	Participation in consultation hours		Self-study		SUM
	Number of study hours	45		6.0		24.0		75
Subject objectives	The aim of the course is presentation of methods for optimizing execution time of algorithms used in Machine Learning utilizing modern frameworks and hardware.							

Learning outcomes	Course outcome	Subject outcome	Method of verification			
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	The student can use the Jupyter notebook environment for running and analyzing advanced computations in the field of machine learning. The student can implement advanced advanced training process handling mechanisms, as well as multi- process communication in the TensorFlow environment.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools			
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study	The student knows methods for reducing time of machine learning computations by choosing appropriate algorithms, vectorization, efficient utilization of available computing resources and parallelization.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools			
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	The student knows the architecture of GPU-equipped computing systems used for machine learning computations. The student can find bottlenecks among the consecutive stages of machine learning model training process.	[SW1] Assessment of factual knowledge			
	[K7_W101] is able to make an in- depth identification of key objects and phenomena related to the field of study, as well as theories that describe them and applicable analytical and design methods	The student knows modern trends in the design of computational systems dedicated to machine learning applications and can analyze their performance.	[SW1] Assessment of factual knowledge			
Subject contents	<ol> <li>Introduction to the course, motivations for High Performance Computing in Machine Learning</li> <li>Recap of primitives, loss functions and gradient methods used in Machine Learning</li> <li>Methods for minimizing evaluation time of Machine Learning models</li> <li>Methods for Machine Learning model training parallelization</li> <li>Monitoring utilization of distributed computing resources used in Machine Learning</li> <li>Techniques for profiling Machine Learning applications</li> <li>Methods for distributed data representation and loading for artificial neural network training</li> <li>Characteristics of hardware used for efficient Machine Learning</li> <li>Parallelization capabilities of chosen Machine Learning frameworks</li> <li>Case studies of artificial neural network training optimization in the fields of text analysis, visual and speech recognition</li> </ol>					
Prerequisites and co-requisites	Basic knowledge in the fields of para	allel computing and machine learning	, programming in Python.			
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	laboratories	50.0%	50.0%			
	mid-term test	50.0%	50.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Evaluating performance of chosen parallelization methods for artificial neural network training. Analyzing the influence of chosen optimization methods on model quality for a chosen application. Comparing capabilities of chosen Machine Learning frameworks based on a chosen application. Comparing performance of chosen hardware models for a chosen Machine Learning application.		
Work placement	Not applicable
