

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Assessment of performance of unmanned maritime vehicles (USV, UUV, AUV) by CFD and MES investigation, PG_00053662							
Field of study	Mechanical Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	6		ECTS credits		2.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Mirosław Gerigk					
	Teachers			-				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	t	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		0.0		0.0		45
Subject objectives	The aim of the course is to familiarize the students with the basic issues related to the performance of unmanned maritime vehicles including the surface and underwater vehicle.							

Learning outcomes	Course outcome	Subject outcome	Method of verification	
	K6_W12	The student has the ability to analyze basic issues related to the research, design and operation of unmanned vehicles in the field of theory and solving simple tasks and practical problems. This includes the topics listed in the objective and item sheet. The student is able to work in a group observing all the rules that determine professionalism.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge	
	K6_U01	The student has the ability to solve basic problems related to the research, design and operation of unmanned vehicles, in terms of assessing the functionality, performance and safety of unmanned vehicles, including performing simple engineering tasks.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment	
	K6_W06	The student has the ability to analyze the basic issues related to the research, design and operation of unmanned objects in the field of theory and solving practical problems, including the selection of methods and tools. This includes the topics listed in the objective and item sheet including the automatics and robotics of the mechanical systems.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge	
	K6_U07	The student has the ability to analyze basic research problems related to the mechanics, construction and mechatronics of unmanned vehicles. These problems relate in particular to: Critical assessment of the knowledge of unmanned vehicles. Maritime unmanned vehicles. Unmanned ground vehicles - UGV. Unmanned aerial vehicles - UGV. Unmanned vehicles - UAV. Unmanned vehicles - research issues (phenomena, parameters, characteristics, features). Unmanned vehicles - construction and construction. Unmanned vehicles - onstruction and construction. Unmanned vehicles - operation, operational environment, missions, tasks. Unmanned vehicles - Challenges: interoperability and PB clouds. Unmanned vehicles - Challenges: PB intelligent. Unmanned vehicles - Overview of the concept of selected PB vehicles - air, land, sea.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment	
Subject contents	Critical assessment of the state of knowledge about unmanned vehicles. Maritime unmanned vehicles including the unmanned surface vehicles USV, unmanned underwater vehicles UUV and AUV. Unmanned vehicles - research issues (phenomena, parameters, characteristics, features). Unmanned vehicles - desig Unmanned vehicles - construction and construction. Unmanned vehicles - operation, operational environment, missions, tasks. Unmanned vehicles - Challenges: structures of the near future. Unmanned vehicles - Challenges: interoperability and UMV clouds. Unmanned vehicles - Challenges: UMV intelligent. Unmanned vehicles - Overview of the concept of selected UMV vehicles - USV, UUV, AUV.			
Prerequisites and co-requisites	The student should have basic information in the field of physics and applied mathematics, mathematical analysis, numerical methods, solid state mechanics, including kinetics and dynamics, construction and construction of complex technical objects, technical drawing and the basics of programming as well as mechatronics and automation.			

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade		
and criteria	Half term and final exam	56.0%	100.0%
