

## Subject card

Subject name and code	Optimization of production process, PG_00056144						
Field of study	Management and Production Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			7.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Technologii Maszyn i Automatykacji Produkcji -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Dominika Zakrzewska					
	Teachers	dr inż. Dominika Zakrzewska dr inż. Mieczysław Siemiątkowski dr inż. Aleksander Mroziński mgr inż. Karolina Chodnicka-Wszelak					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	30.0	15.0	0.0	90
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	90	0.0		0.0	90	
Subject objectives	Presentation of methods to optimize production processes using mathematical models. Discussion of methods of empirical research and defining optimization problems as well as creating optimization and statistical models of selected processes.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_K01] feels the need for self-realization by learning throughout life, is looking for modern and innovative solutions in their actions, is able to think creatively and act in an entrepreneurial way	When carrying out an optimization task, the student is aware of the limitations and is able to look for new, innovative solutions.	[SK5] Assessment of ability to solve problems that arise in practice
	[K6_U01] can find the necessary information in professional literature, databases and other sources, knows basic scientific and technical journals in the field of production management, quality and operation management, can integrate the obtained information, formulate conclusions and justify opinions	The student looks for the necessary information in the professional literature to carry out the process of statistical research and production optimization.	[SU4] Assessment of ability to use methods and tools
	[K6_W10] has basic knowledge necessary to understand the economic determinants of engineering activities and economic law, to improve the work environment affecting productivity, costs and quality of work	The student understands the relationship between the method of production optimization and economic and legal aspects.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_W08] has basic management knowledge, including process and product quality management, and detailed knowledge of integrated and standardized quality, environmental, health and safety management systems	The student has basic knowledge of planning the implementation and statistical analysis of the results of technological experiments.	[SW1] Assessment of factual knowledge
	[K6_U06] when formulating and solving engineering tasks a student can see aspects of system management and organization of individual and as a team, taking into account the human factor, has necessary preparation for work in an industrial environment, and knows the rules and standards related to occupational health and safety	The student defines problems and creates optimization models and takes into account technical, technological and economic conditions of selected processes during optimization.	[SU2] Assessment of ability to analyse information
Subject contents	<p>Introduction to mathematical optimization.</p> <p>Defining optimization problems.</p> <p>Creating statistical models of selected processes.</p> <p>Creating optimization models of selected processes.</p> <p>Optimization methods and examples of optimization tasks.</p> <p>Structure of the manufacturing process.</p> <p>Structural optimization.</p> <p>Parametric optimization.</p> <p>Optimization methods.</p> <p>Optimization criteria.</p> <p>Evaluation of optimization variants.</p> <p>Selection of optimal parameters and treatments.</p>		

Prerequisites and co-requisites	Fundamentals of the application of analytical methods and mathematical software. Basic knowledge of designing the production process.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture test	60.0%	25.0%
	Laboratory reports	60.0%	25.0%
	Project	60.0%	25.0%
	Exercise test	60.0%	25.0%
Recommended reading	Basic literature	<p>Stadnicki Jacek, "Theory and practice of solving optimization problems with examples of technical applications", Wydawnictwo Naukowe PWN 2023.</p> <p>Kusiak Jan, Danielewska-Tulecka Anna, Oprocha Piotr, "Optimization. Selected methods with examples", Wydawnictwo Naukowe PWN 2021.</p> <p>Płonka Stanisław, "Multi-criteria optimization of machine parts manufacturing processes", WNT Warszawa 2010.</p> <p>Korzyński Mieczysław, "Experiment methodology - planning, implementation, development of results of technological experiments", WNT Warszawa 2006.</p>
