

Subject card

Subject name and code	Offshore Systems, PG_00056429							
Field of study	Ocean Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	3		Language of instruction			Polish		
Semester of study	6		ECTS credits		2.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Institute of Naval Architecture -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname	Subject supervisor		dr inż. Jacek Nakielski					
of lecturer (lecturers)	Teachers dr inż. Jacek Nakielski							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	0.0	0.0	0.0		0.0	30
	E-learning hours inclu	uded: 0.0						
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation i consultation h	articipation in onsultation hours		udy	SUM
	Number of study hours 30			3.0		17.0		50
Subject objectives	The aim of the course is to familiarize students with methods of obtaining raw materials, including: crude oil and natural gas from under the seabed and obtaining energy from renewable sources on the example of offshore wind farms.							
Learning outcomes	Course out	come	Subject outcome			Method of verification		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems [K6_W08] has knowledge of the principles of sustainable development [K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems		The student is able to distinguish individual elements of offshore installations.			[SW1] Assessment of factual knowledge		
			The student is able to interpret legal acts contained in both the Constitution of the Republic of Poland and the Energy Law Act for the purpose of limiting the negative effects of the energy industry on the atmosphere and indicate the components of the sustainable one development, using renewable energy sources, which involve, among others, with maintaining energy security and environmental protection, as well as meeting the country's social and economic needs. The student is able, based on the acquired knowledge, to formulate simple engineering tasks and skillfully answer them.		[SU2] Assessment of ability to analyse information			

Data wygenerowania: 11.04.2025 18:39 Strona 1 z 3

	The course material includes knowledge in the field of:						
	- methods of searching for oil and natural gas under the seabed,						
	- installation and construction of individual elements of the oil field,						
	- basic methods of undersea drilling,						
	- methods of laying submarine pipelines,						
	- type of ocean technical facilities for conducting undersea works, including drilling and structures, devices and equipment of units for the construction and operation of the oil field (FSU/FSO, FPSU/FPSO, FPDSO, drilling and production platforms),						
	- transhipment operations of crude oil and natural gas on the high seas,						
	- location of wind farms at sea,						
	- installation and construction of wind farms,						
	- renewable energy production,						
	- Polish and international regulations and institutions supervising the course of individual investment stages, starting from the conceptual design, ending with operation and distribution.
