

Subject card

Subject name and code	, PG_00056312						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marek Dzida				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		49.0	100
Subject objectives	The objective is to learn the fundamentals of control theory and the structures and elements of basic automation systems, as well as general information about control system design.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems		Able to formulate a simple task, and its specification engineering of automation of technological process		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W04] has a basic knowledge in IT, electronics, automation and control, computer graphics useful to understand the possibilities of their application in ocean technology		The student has the knowledge of methods and tools applied for design of control system		[SW1] Assessment of factual knowledge		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems		The student is able to assess usefulness of typical methods and tools applied in engineering to select the proper method and tool for solving the simple problems		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	1. Introduction and basic concepts 2. Classification of control systems 3. Modeling of dynamic systems and description of elements of automatic control systems 4. Types of mathematical models of dynamic systems: differential equation, transmittance, block diagram, linearization 5. Transition function and time characteristics 6.Feedback 7.Analysis of time-domain and frequency-domain control systems 8.Stability of linear control systems 9. Controls		
Prerequisites and co-requisites	Pre-requisite subjects: 1. Mathematics 2. Physics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium for credit from exercises	50.0%	40.0%
	Colloquium for credit from lecture	50.0%	60.0%
