| Subject name and code | , PG_00056323 | | | | | | |
| Field of study | Ocean Engineering | | | | | | |
| Date of commencement of studies | October 2022 | Academic year of realisation of subject | | | 2024/2025 | | |
| Education level | first-cycle studies | Subject group | | | | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 3 | Language of instruction | | | Polish | | |
| Semester of study | 6 | ECTS credits | | | 4.0 | | |
| Learning profile | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr inż. Jacek Rudnicki | | | | | |
| | Teachers | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 15.0 | 0.0 | 0.0 | 0.0 | 45 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 45 | | 5.0 | | 50.0 | 100 |
| Subject objectives | To teach systematic approach to problems of engine room piping systems. To familiarize with typical construction solutions and characteristics of the basic elements of the installation. To teach methods of calculations and selection of selected elements of piping systems. | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | Method of verification | | |
| | [K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems | | Describes the course of action in the calculation and selection of major components of a combustion engine room installation. Identifies the marine equipment market for the supply of major components and accessories of marine piping systems. | | [SW1] Assessment of factual knowledge | | |
| | [K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems | | Explains the general structure of typical solutions of engine room installations systems with diesel engines. Indicates the determinants classification determinants influencing structure of the installation. | | [SW1] Assessment of factual knowledge | | |
| | [K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems | | Draws block and schematic diagrams of the discussed installations. Calculates and selects main elements of the installation on the basis of technical documentation of engines and catalogs of factory ship devices. | | [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment | | |
| Subject contents | Lecture Basic knowledge of engine room piping systems - functions, design conditions, classification requirements, diagrams, CAD-CAM support. Tasks, general structure and typical construction solutions of selected engine room piping systems: cooling, fuel, lubricating oil, exhaust gas, compressed air, heating steam. Principles of selection and calculation of basic elements of selected piping systems. Auditorium exercises Calculation of flow resistance in pipelines of selected power systems - selection of pumps. Calculation and selection of: heat exchangers, fuel and lubricating oil separators, starting air compressors. Calculation and selection of exhaust gas system components. | | | | | | |
| Prerequisites and co-requisites | Knowledge of the subject Internal combustion engines, Thermodynamics, Pumps and compressors, Boilers and heat exchangers. | | | | | | |

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|---------------------------------|-------------------------------|--|-------------------------------|
| | Midterm colloquium - exercise | 51.0% | 30.0% |
| | Midterm colloquium - lecture | 51.0% | 70.0% |

| <p>Example issues/ example questions/ tasks being completed</p> | <p>Lecture</p> <ol style="list-style-type: none"> 1. Present the algorithm for the selection of the heavy fuel heater for low-speed main drive engines the necessary input data, calculation scheme, output values. 2. Draw and discuss the block diagram of the high temperature circuit (HT) of the cooling water of the low-speed engine cylinders, indicating how to incorporate the evaporator and preheat engine into this system (only the solution with connected HT and LT circuits). 3. Draw and discuss the schematic diagram of the fuel supply system (from the service tank) of the main drive Diesel engine operating with heavy fuel. 4. Draw and describe the flowchart of the continuous and periodic purification system of circulating oil explain the differences in the functioning of the systems. <p>Auditorium exercises</p> <ol style="list-style-type: none"> 1. If the max. permissible flow velocity of the cooling water in the pipeline is xx m/s and the required flow rate is yy m³/h, the medium pressure is zz bar and its max. permissible temperature is vv °C, this means that the minimum internal diameter of the pipeline should be approx. . [mm]. 2. Calculate the heat transfer surface of a shell-and-tube cooler or alternatively a plate cooler in a freshwater system cooling the cylinders if the cooler is to dissipate heat $Q = xx$ and the freshwater volume flows $V1 = yy$ and central water $V2 = zz$ are known. Consider parallel configuration of oil and cylinder water coolers and tropical design conditions. |
