

Subject card

Subject name and code	, PG_00056328						
Field of study	Ocean Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Faculty of Ocean Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Zbigniew Korczewski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Teach the theoretical foundations of technical diagnostics, general theory of exploitation and technology of repair of marine systems and equipment.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W08] has knowledge of the principles of sustainable development		Student can characterize the process of maintenance of the main elements of ship power systems in the aspect of its influence on the environment		[SW1] Assessment of factual knowledge		
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems		Student knows the basic assumptions, criteria and principles of the implementation of basic strategies for the operation of marine energy systems.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_W06] has an organized knowledge on engineering methods and design tools allowing the conducting of projects within the construction and operation of ocean technology objects and systems		Student knows the basic notions of technical diagnostics. He knows the criteria for assessing the technical condition of the machine. Student is able to describe the elements of the diagnostic system of machines or energy systems, measures and methods of diagnostic operation.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems		Student is able to carry out a diagnostic test of the Diesel engine and assess the condition of its components based on the results of control parameters' measurement. Student is able to carry out a diagnostic test of a simple drive system by means of vibration and acoustic emission method.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		

Subject contents	<p>Lecture: Basic notions and definitions: the concept of technical diagnostics, the notion of diagnosis and its reliability and accuracy, the notion of a diagnostic, diagnosed and diagnosing system, input and output signals and disturbances. The essence of technical diagnostics and its purpose and tasks. Forms of diagnostic activity: diagnosing, forecasting and genesis. Machine and energy system as an object of diagnosis. Diagnostic models of machines and energy systems: purposes of creating models, types of diagnostic models, principles of creating diagnostic models, practical usefulness of diagnostic models. Diagnostic methods and types of diagnostic inference about the technical condition of machines and energy systems. Diagnostic systems for the selected machines (high power engines) and energy devices and their reliability. Classification supervision of the operation of ship systems. Basic stages of overhaul of a technical device - general technological operations during the repair of a marine power plant. Verification of the technical condition and selected issues from the technology of repairs of basic elements of the ship, main propulsion system. Laboratory: Identification of the technical condition of the piston-cylinder and injection system of a compression-ignition engine by indicating its cylinders. Identification of the technical condition of a simple drive system using the vibration method and acoustic emission. Diagnostic examination of elements of the engine injection equipment on a test stand. Diagnostic examination of the valve timing unit of the Diesel engine on a laboratory test bed. Identification of the operational suitability of the lubricating oil by testing its viscosity. Diagnostic examination of the Diesel engine by means of the thermal imaging method (infrared camera). Determination of the chemical composition of engine exhaust gases. Verification of the technical condition of selected elements and systems of a diesel engine with the use of stereometric measurements. Static engine regulation.</p>		
Prerequisites and co-requisites	Knowledge of the subject internal combustion engines. Knowledge of subjects related to the basics of the operation of energy machines and devices.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test	50.0%	75.0%
	Reports from the performed laboratoryor	100.0%	25.0%
