

## Subject card

Subject name and code	Water and Wind power stations (WOiO), PG_00042089						
Field of study	Power Engineering, Power Engineering						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			English		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Joanna Grzelak				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	15.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		65.0	100
Subject objectives	<ol style="list-style-type: none"><li>1) Familiarization with flow models, in particular incompressible, viscous flows in one-dimensional terms.</li><li>2) Formation of a boundary layer and generation of energy losses.</li><li>3) Familiarization with the construction of large onshore and offshore wind turbines.</li><li>4) Micro wind energy, construction of different types of windmills and their characteristics, innovative solutions</li><li>5) Construction of traditional water turbines</li><li>6) Construction and operation of innovative wave energy harvesting systems.</li></ol>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W06] knows classic and developmental energy technologies, rules for the selection and operation of heat and energy devices and installations, basic principles of energy systems operation, basic issues regarding the reliability of energy devices and diagnostics, environmental effects of energy technologies used, methods of using renewable energy sources		
	[K6_W12] has basic knowledge of the life cycle and repairs of energy equipment in the field of thermal power stations, thermal and energy systems and heating systems, internal combustion engines and compressors as well as rotating machines		
	[K6_W13] has basic knowledge of the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, internal combustion engines, compressors and rotating machines, has basic knowledge of the regulation of energy equipment and methods of their selection depending on the needs		
	[K6_K04] is able to formulate opinions on technical and technological processes in energy and sanitary engineering		
Subject contents	<p>Characteristics of fluid - water, air; assumptions and consequences of a continuous medium. Basic equations of behavior and their application to the stationary and incompressible description. Real flow, special flow phenomena. Boundary layer. Wind energy. Horizontal axis windmills. Darrieus rotors.vSavonius rotors. Hydropower generation. Hydro turbines.</p>		
Prerequisites and co-requisites	Basic Fluid Mechanics Course		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lecture - assessment test	51.0%	50.0%
	seminar - evaluation from the presentation	51.0%	50.0%
Recommended reading	<p>Basic literature</p> <p>Puzyrewski, R., Fluid mechanics, Scientific Publishing House PWN, 1987;</p> <p>Krzyżanowski, W., Water turbines. Construction and principles of regulation, Scientific and Technical Publishing Houses. Warsaw, 1971;</p> <p>Douglas, J., Gasiorek, J., et al., Fluid Mechanics, Pearson Education, 2005;</p> <p>Gryboś, R., A collection of tasks in fluid mechanics, Scientific Publishing House PWN, Warsaw, 2012;</p> <p>Jeżowiecka-Kabsch, K., Szewczyk, H., Fluid Mechanics, Publishing House of Wrocław University of Technology, Wrocław 2001, ISBN 83-7085-597-0;</p>		

	Supplementary literature	<p>Łaski, A., Water power plants. Ed. Science and Technology, Warsaw, 1975;</p> <p>Hydropower. Introduction to Hydro Energy Systems, Kötter Manuela, Mathur Jyotirmay, ISBN 978-3-642-20709-9</p> <p>Wind Turbines, Erich Hau, ISBN 978-3-540-29284-5;</p> <p>Rduch, J., Turbine selection for small water power plant, IX Forum of Renewable Energy Sources, Zakopane, 2003.</p>
	eResources addresses	Adresy na platformie eNauczenie:
Example issues/ example questions/ tasks being completed	<p>Describe the components of Bernoulli's equation</p> <p>State the components of the disposable height.</p> <p>State the characteristic features of a Savonius rotor.</p> <p>Describe the construction and operation of a Francis turbine.</p> <p>Which water turbine is appropriate for very high gradients?</p>	
Work placement	Not applicable
