

Subject card

Subject name and code	Microelectromechanical Systems, PG_00064021						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2025	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Microelectronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Piotr Płotka					
	Teachers	dr hab. inż. Piotr Płotka					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	4.0	16.0	50		
Subject objectives	Introduction to MEMS technologies, presentation of recent developments in MEMS, as well as teaching of application of tools used for simulating of electronic circuits for designing of MEMS.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	Recognizes and understands possibilities of application of MEMS modules for designing of save, efficient and automated systems and processes.			[SW1] Assessment of factual knowledge		
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science	Is able to apply his already gained knowledge in physics and chemistry for modelling of operation of MEMS elements which he/she did not know earlier			[SU1] Assessment of task fulfilment		
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	knows and understands construction and operation mechanisms of basic MEMS elements representative for applications in various fields			[SW1] Assessment of factual knowledge		
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study	is able to apply creatively computer aided design tools developed for electrical circuits in order to design complex electromechanical systems			[SU1] Assessment of task fulfilment		

Subject contents	<p>Lectures:</p> <ol style="list-style-type: none"> <li>1. Introduction. Evolution of microelectromechanical systems and markets.</li> <li>2. MEMS fabrication and materials - patterning, etching, deposition and stress control.</li> <li>3. MEMS fabrication and materials - bonding, heterogeneous integration, packaging and mechanical property.</li> <li>4. Review of MEMS elements and their fabrication sensors.</li> <li>5. Review of MEMS elements and their fabrication actuators, energy sources.</li> <li>6. Applications of MEMS - automobile &amp; home, information processing &amp; telecommunication</li> <li>7. Applications of MEMS biomedical &amp; chemical</li> <li>8. Application of electronic circuits simulators for electromechanical simulations: current force analogy</li> <li>9. Application of electronic circuits simulators for electromechanical simulations: voltage force analogy</li> <li>10. Design of mechanical elements beams and springs</li> <li>11. Design of mechanical MEMS elements with beams and springs</li> <li>12. Design of mechanical MEMS elements with mechanical resonance</li> <li>13. Design of MEMS elements for electronic applications at radio frequencies.</li> <li>14. Design of MEMS elements with piezo-elements.</li> <li>15. Integration of MEMS and electronic circuits.</li> </ol> <p>Lab:</p> <p>Investigation of a beam type model of a MEMS resonator with capacitive coupling  Applications of accelerometers in a wing model  Applications of pressure sensors in a wing model  Investigation of MEMS accelerometers, inclinometers and gyroscopes  Frequency stabilization with MEMS resonators</p>											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;">Subject passing criteria</th> <th style="width: 30%;">Passing threshold</th> <th style="width: 30%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Midterm colloquium</td> <td>50.0%</td> <td>50.0%</td> </tr> <tr> <td>Practical exercises</td> <td>50.0%</td> <td>50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm colloquium	50.0%	50.0%	Practical exercises	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Midterm colloquium	50.0%	50.0%										
Practical exercises	50.0%	50.0%
