

## Subject card

Subject name and code	Electric Vehicles, PG_00053420						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jarosław Guziński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to acquire knowledge and skills in the field of electric autonomous vehicles. The aim of the course is to get knowledge and skills in the field of electromobility, in particular electric drives, electric motors, power-electronic converters and charging systems used in electric vehicles as well as issues related to self-driving cars.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
Subject contents	<p><b>Lecture.</b> Introductory news. Energy demand, battery capacity assessment, vehicle energy consumption meters, driving range estimation. Energy storage and converters for cooperation with energy sources: batteries, flywheel, fuel cells, supercapacitors. Automatic systems of converter drive of vehicles with electric motors. Vehicle drives with permanent magnet motors. Electric drives in hybrid vehicles: diesel-electric. Methods of controlling electric motors in vehicles. Sensorless control. Powerelectronic converters in electric vehicles. Battery charging systems. Superior vehicle control. Self-driving cars. Hydrogen technologies in electric vehicles. Design of an electric vehicle with battery supply.</p> <p><b>Lab.</b> Simulation part: Steer-By-Wire (SBW) in cars, electric vehicle drive system with PMSM motor and FOC sensorless control method, two-wheeled vehicle control. Experimental part: torque and speed control of the induction motor for building speed-torque characteristics of the electric vehicle, control of the electric drive with an PMSM motor for electric vehicle</p>						
Prerequisites and co-requisites	Knowledge of the basics of electrical engineering and automation						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Project		60.0%		50.0%		
	Lab		60.0%		50.0%
