GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Design of Electric Systems, PG_00016898		
Field of study	Electrical Engineering		
Date of commencement of studies	February 2024	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Grzegorz Kostro	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	15.0	15.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	5.0	25.0	75

Subject objectives

The aim of the course is to introduce students with the methods of analysis, modeling and design of electromechanical drive systems.

Learning outcomes

Course outcome	Subject outcome	Method of verification
K7_W13	Student is able to connect, configure and start the drive system fed from the power converter.	[SW1] Assessment of factual knowledge
K7_U02	Student knows how to prepare and present an oral presentation on a chosen technical topic	[SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
K7_K03	The student is able to cooperate with others in order to implement the given task.	[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
K7_W10	Student knows the basic power electronics and drive systems. Student knows the methods of control and diagnostics of power electronic systems.	[SW1] Assessment of factual knowledge
K7_K02	Student understands the non-technical effects of engineering activities on the environment	[SK5] Assessment of ability to solve problems that arise in practice
K7_U07	The student is able to analyze the operating states of an electromechanical system fed by a power converter	[SU2] Assessment of ability to analyse information
K7_U06	Student can make the analysis, develop the model and simulate the basic operating states of the electric system, can perform the design of electric system	[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
K7_W04	Student knows how to perform the analysis of the electromechanical system in chosen operating states	[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects

Subject contents	**Lecture** Structures and components of modern electromechanical drive systems. Calculation of equivalent parameters and modeling of complex electromechanical drive systems. Thermal and Electromagnetic analysis of electromechanical transducers using analytical and numerical methods. Analysis of the motion equations and calculation of mechanical transient processes in complex electromechanical drive systems. Design principles of electromechanical drive systems. Selection rules of the required power and drive parameters of different types of electromechanical drive systems. **Laboratory** Identification of mechanical and electromagnetic parameters of electromechanical drive system. Study of selected states of a electromechanical system with BLDC motor. Study of selected states of a electromechanical system with induction motor fed by power converter. Study of selected states of a electromechanical system with DC motor fed by DC converter. **Exercises** Issues related to project management. Design calculations for the selected electromechanical drive system and the development of a numerical model with the use of CAD programs. Modeling of elements of the electromechanical system with the use of programs for calculations using the finite element method. Analysis of selected system operating states based on the results of simulation tests.
Prerequisites and co-requisites	Knowledge in the range of electrical machines and analysis methods of electric and magnetic circuits. Extended knowledge in the field of power electronics. Knowledge in the range of design, programming and diagnostics of power converters.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Midterm colloquium	60.0%	20.0%
Practical exercise	60.0%	30.0%
Project	60.0%	50.0%

Adresy na platformie eNauczanie:

Example issues/ example questions/ tasks being completed

1. Calculation of the operation point of a permanent magnet.
2. The choice of the motor to the drive system.
3. The choice of the gear box to the drive system.
4. Calculation of basic parameters of the gear box.
5. Design calculations of electric machines.
