

Subject card

| Subject name and code | EMC of Integrated Devices, PG_00064041 | | | | | | | | |
|---|---|---------|---|------------|---|------|---------|-----|--|
| Field of study | Electronics and Telecommunications | | | | | | | | |
| Date of commencement of studies | February 2025 | | Academic year of realisation of subject | | 2025/2026 | | | | |
| Education level | second-cycle studies | | Subject group | | Optional subject group Specialty subject group Subject group related to scientific research in the field of study | | | | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | | | | |
| Year of study | 2 | | Language of instruction | | Polish | | | | |
| Semester of study | 3 | | ECTS credits | | 2.0 | | | | |
| Learning profile | general academic profile | | Assessment form | | exam | | | | |
| Conducting unit | Department of Microwave and Antenna Engineering -> Faculty of Electronics, Telecommunications and Informatics | | | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | prof. dr hab. inż. Włodzimierz Zieniutycz | | | | | | |
| | Teachers | | prof. dr hab. inż. Włodzimierz Zieniutycz | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Projec | t | Seminar | SUM | |
| | Number of study hours | 15.0 | 0.0 | 15.0 | 0.0 | | 0.0 | 30 | |
| | E-learning hours included: 0.0 | | | | | | | | |
| Learning activity Learning activity Classes included plan | | | | Self-study | | SUM | | | |
| | Number of study hours | 30 | | 3.0 | | 17.0 | | 50 | |
| Subject objectives | Presentation of phen discharge, their desc | | | | | | | | |

| Learning outcomes Course outcome | | Subject outcome | Method of verification | | | | |
|----------------------------------|--|--|--|--|--|--|--|
| | [K7_U12] is able, to an increased extent, to analyze the operation of components and systems related to the field of study, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to the field of study, including computer simulations, interpret the obtained results and draw conclusions | student has skils in measurement of the network parameters related to the electromagnetic compatibility and he can apply suitable software to simulate the interferences in the microwave networks. | [SU4] Assessment of ability to use methods and tools | | | | |
| | [K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science | student has skills in determining the sources of interferences and in formulating the proposals of the prevention. | [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools | | | | |
| | [K7_W02] knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study | student has mastered the knowledge concerning radiated and conducted emissions, radiated and conducted susceptibilities, the sources of interferences, coupling, shielding methods and transmission of pulse in line including the effects of mismatching. | [SW1] Assessment of factual knowledge | | | | |
| | [K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum | student has mastered knowledge of parasitic radiation phenomena in RF & Microwave integrated circuits and systems as well as the methods of their measurements and prevention. | [SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects | | | | |
| Subject contents | Aspects and reguirements for electromagnetic compatibility, conducted and radiated emissions and susceptiblity, source of noise and interference, common and differential signals, method their separation and supression, coupling in the wave structures and radiation sources, electric, magnetic and electromagnetic shielding effectiveness of the electronic components and cables, transmission lines and signal integrity, digital transmisssion in the coupled lines, matching effects influence the digital transmission, crosstalk, system design for PCB, chamber for EMC measurements | | | | | | |
| Prerequisites and co-requisites | Basic on electrodymanics, theory of waveguiding sructures, basic of RF & Microwaves | | | | | | |
| Assessment methods | Subject passing criteria | Passing threshold | Percentage of the final grade | | | | |
| and criteria | written test | 50.0% | 70.0% | | | | |
| | laboratory | 50.0% | 30.0% | | | | |
| Recommended reading | Basic literature | Clayton R.Paul Electromagnetic Compability, Willey 2006 | | | | | |
| | Supplementary literature | powerpoint presentation of the lecture | | | | | |
| eResources addresses | | Adresy na platformie eNauczanie: | | | | | |

Data wygenerowania: 28.10.2024 14:13 Strona 2 z 3

| Example issues/ example questions/ tasks being completed | 1. Fundamental EMC phenomena which are subject to norms. 2. Describe the mechanism of EDS for example of the computer hardware operator. 3. How to measure common mode? 4. Describe the rules of the connection of coaxial cable to chasssis. 5. Fundamental problems of magnetic field shielding for low frequencies |
|--|---|
| Work placement | Not applicable |

Document generated electronically. Does not require a seal or signature.
