GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Systems Software Design, PG_00064079					
Field of study	Electronics and Telecommunications					
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025	
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study	
					Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	1		Language of instruction		English	
Semester of study	1		ECTS credits		3.0	
Learning profile	general academic profile		Assessment form		assessment	
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics					
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Arkadiusz Harasimiuk				
	Teachers	dr inż. Arkadiusz Harasimiuk				
		dr inż. Piotr Suchomski				
		dr inż. Michał Lech				

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	0.0	0.0	20.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	6.0	39.0	75

Subject objectives	Student describes software design and development for complex IT systems based on Linux (POSIX) and Windows operation systems platforms with the aid of C/C++, C#, Java programming languages.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	Student knows the basics of agile methods of software development. Student knows the tools that enable group work during software development. Student is able to configure and use coding tools, debug tools and software optimization tools.	[SW1] Assessment of factual knowledge
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study	The student knows and understands tools to support software development processes, to find bugs in software and tools to optimise software code.	[SU4] Assessment of ability to use methods and tools
	[K7_W08] knows and understands, to an increased extent, the fundamental dilemmas of modern civilisation, the main development trends of scientific disciplines relevant to the field of education	The student knows and understands the processes governing teamwork, ways of communicating and reporting, and distributed working	[SW1] Assessment of factual knowledge
	[K7_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, making assessment and critical analysis of the prepared software as well as a synthesis and creative interpretation of information presented with it	Sstudent describes design and development of software for complex systems in the field of TI based on operating system platforms, Linux (POSIX) and Windows (.NET) using the programming languages: C / C ++, C #, Java, Python.	[SU4] Assessment of ability to use methods and tools

Subject contents	Design and development of complex IT (Information Technology) systems. Decomposition of processing in complex IT systems.

System specification and project documentation in IT systems.

Tools for workgroup cooperation, source code revision control, automatic generation of software documentation and bug tracking systems.

Software runtime configurations. Tools for software debugging, profiling (performance analysis) and quality control.

Role of the processes in IT systems. Process management in operation systems.

Threads and thread synchronization.

Interproces Communications mechanizms.

Access to system services and resources (timers and counters, files and I-O devices, memory and storage management, dynamic and shared librares).

Network and inter platform communication in complex IT systems (network sockets, , RPC/RMI, middleware platforms).

Application of software libraries and open source projects in system software development. |
| Prerequisites and co-requisites | No requirements |

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium.	50.0%	50.0%
	Project realised during semester	50.0%	50.0%

Recommended reading	Basic literature	Material prepared by the lecturer in the form of xeroxcopy.
	Supplementary literature	Love R., Linux System Programming, OReilly, 2013. Kerrisk M., The Linux Programing Interfacce. A Linux and UNIX® System Programming Handbook, No Starch Press, 2010. Hart J., Windows System Programming, Addison-Wesley, 2010.
