

Subject card

Subject name and code	Channel Coding in Radio Communication Systems, PG_00064099						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2025	Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies	Subject group			Optional subject group Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			English		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Radiocommunication Systems and Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Andrzej Marczak					
	Teachers	dr inż. Andrzej Marczak					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		6.0		39.0	75
Subject objectives	The aim of the course is to familiarize students with the methods of channel coding.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W10] knows and understands, to an increased extent, the basic processes occurring in the life cycle of equipment, objects and technical systems, as well as methods of supporting processes and functions, specific to the field of study	The student knows the methods used in channel coding and channel decoding and basic assessment methods quality of data transmission.	[SW1] Assessment of factual knowledge
	[K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	The student knows and understands what role play individual blocks functional in encoders.	[SW1] Assessment of factual knowledge
	[K7_U07] can apply advanced methods of process and function support, specific to the field of study	The student can use acquired knowledge regarding basic channel coding methods to understanding of operating methods practically used encoders	[SU1] Assessment of task fulfilment
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The student can perform simulation software work of channel coder.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
Subject contents	Application of cyclic codes in radiocommunication systems, examples of encoders and decoders. Convolutional coding, code description using generating functions and lattice graph. Correction ability of convolutional codes, free Hamming distance. Soft and hard-coding decoding of convolutional codes. Viterbi's algorithm. Computational complexity of the Viterbi algorithm. MAP decoding algorithm. Systematic and unsystematic convolutional codes. The use of convolutional codes in radiocommunication systems. Interleaving of code strings of convolutional codes. Excluding bits from convolutional code strings and their decoding, the impact of exclusion on correction capabilities. Turbocodes, work principle, correction abilities. Turbocodes in radiocommunication systems. Turbocode decoding. LDPC codes. Decoding LDPC codes.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	channel coding lecture	50.0%	50.0%
	project	50.0%	50.0%
Recommended reading	Basic literature	P. Sweeney ERROR CONTROL CODING From Theory to Practice, Wiley 2002.	
	Supplementary literature	No requirements	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Viterbi's algorithm.		
Work placement	Not applicable		

Document generated electronically. Does not require a seal or signature.
