

Subject card

| | | | | | | | |
|---|--|---|-------------------------------------|------------|--|---------|-----|
| Subject name and code | Mathematics II, PG_00064115 | | | | | | |
| Field of study | Mechanical and Medical Engineering | | | | | | |
| Date of commencement of studies | October 2024 | Academic year of realisation of subject | | | 2024/2025 | | |
| Education level | first-cycle studies | Subject group | | | Obligatory subject group in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 1 | Language of instruction | | | Polish | | |
| Semester of study | 2 | ECTS credits | | | 8.0 | | |
| Learning profile | general academic profile | Assessment form | | | exam | | |
| Conducting unit | Mathematics Center -> Vice-Rector for Education | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr Anna Niewulis | | | | | |
| | Teachers | dr Anna Niewulis | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 45.0 | 0.0 | 15.0 | 0.0 | 90 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | | SUM |
| | Number of study hours | 90 | 14.0 | | 96.0 | | 200 |
| Subject objectives | The aim of this subject is to obtain the student's competence in the range of using the basic methods of mathematical analysis. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering. | | | | | | |
| Learning outcomes | Course outcome | Subject outcome | | | Method of verification | | |
| | [K6_W01] has knowledge in the field of natural sciences, including mathematics, contemporary physics, chemistry, and human anatomy with physiology | The student uses basic derivative properties. The student analyzes the properties of the function based on the study of its first and second derivative. The student applies basic formulas and integration techniques to calculate indefinite integrals. The student performs basic operations on complex numbers. | | | [SW1] Assessment of factual knowledge | | |
| | [K6_U01] is able to acquire knowledge and self-studying, he/she is able to find needed information in specialist books, databases and other sources, he/she is able to integrate information and draw conclusions, he/she is able to communicate by using different technics in work and outside | The student appreciates the importance of expanding knowledge and takes up the challenges associated with working on group problem solving. The student combines knowledge in the field of mathematics with knowledge from other fields. | | | [SU2] Assessment of ability to analyse information | | |
| | [K6_U04] is able to utilize empirical, analytical, simulation, and computer-based methods to formulate and solve engineering tasks in the field of medical and mechanical engineering | The student is able to apply the mathematical methods for analysis to solve problems in the field of mechanical and medical engineering. | | | [SU3] Assessment of ability to use knowledge gained from the subject | | |

| | | | | |
|--|---|--|---|-------------------------------|
| Subject contents | Complex numbers. Basic definitions and properties of vectors. Scalar, vector, mixed product - applications. Equation of a straight line and a plane in space. Functions of many variables. Limit, function continuity, partial derivatives of functions of many variables, extremes of functions of many variables. Double integral over rectangle and normal area. Polar coordinates. Applications. Triple integral over a cuboid and normal area. Cylindrical and spherical coordinates. Applications. First order ordinary linear equation. Second order linear differential equations with constant coefficients. Fundamental set of solution of the homogeneous linear differential equation. Non-homogeneous linear differential equations. Higher order linear differential equations with constant coefficients. Systems of differential equations. Laplace transform. Partial linear differential equations of first order. The Cauchy initial value problem. Partial differential equations of second order . | | | |
| Prerequisites and co-requisites | No recommendations | | | |
| Assessment methods and criteria | Subject passing criteria | | Passing threshold | Percentage of the final grade |
| | Exam | | 50.0% | 50.0% |
| | Project | | 50.0% | 10.0% |
| | Test | | 50.0% | 40.0% |

| | eResources addresses | | Adresy na platformie eNauczanie: | |
| Example issues/ example questions/ tasks being completed | 1. Calculate a double integrals. 2. Calculate a triple integrals. 3. Find a general solution of differential equations. 4. Find a particular solution satisfying the given initial conditions of the differential equations. 5. Solve a system of differential equations. | | | |
| Work placement | Not applicable | | | |
