

Subject card

Subject name and code	Fundamentals of Authomatics, PG_00064121							
Subject name and code Field of study	Mechanical and Medical Engineering							
Date of commencement of studies			Academic year of realisation of subject		2025/2026			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction			Polish		
Semester of study	3		ECTS credits		5.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technol				echnology			
Name and surname	Subject supervisor	dr hab. inż. Rafał Hein						
of lecturer (lecturers)	Teachers							
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	15.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity Participation in classes include plan				Self-study SUM			
	Number of study hours	60		4.0		61.0		125
Subject objectives	The aim of the study is to acquire knowledge about fundamental issues related to automatic control systems				ntrol systems			
Learning outcomes			Subject outcome			Method of verification		
			The student is able to use the knowledge acquired in the course to design and simulate basic control systems used in mechanical and medical engineering.			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		
	practical engineering tasks, and critically analyze existing technical solutions, evaluating their functionality, particularly in the context of designing mechanical and medical-mechanical devices		The student is able to design a control system used in mechanical-medical engineering systems and identify its parameters.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task			
	[K6_W04] has knowledge in automation and robotics of mechanical systems or electrical and electronic engineering or thermodynamics and fluid mechanics including bioreology		The student is able to analyze the operation of a control system and design a control system consisting of mechanical, electrical and electronic subsystems.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation

algebra. Classification of control systems. Open and closed loop feedback control systems. Properties feedback control systems. All proteins and its application. The concept of traineter function. Static characteristics of automation systems. Dynamic the process of the proteins of the proteins. Control systems components proportional, integral derivative, delay, first and second order systems. Controllers. Plo controller - controllers, structure, characteristics. Concept of stability. Stability of control systems. Conditions for stability. Algebraic (Hurwitz North) and graphic (Nyquist) enterts of stability. Stability mangin. Tutorials Application of the Laplace transform in solving differential equations. Signals description in the time doma and determination of the Laplace transform in solving differential equations. Signals description in the time doma and determination of the Laplace transform in solving differential equations. Signals description in the time doma and determination of the Laplace transform. Determination of transfer function for systems with different physical nature. Rules and block diagram reduction. Determination of time responses of systems with different physical nature. Rules and block diagram reduction. Determination of time responses of systems with different physical nature. Rules and analysis of control systems and controller. Determination of stability mangin. Choice of the type and parameters of the controller. Designing and analysis of simple continuous control systems. Simulation and analysis of control systems in the Metals & Simulation and analysis of control systems. Investigation of temperature control system with PID controller. Investigation of temperature control system with PID controller. Investigation of temperature control system with PID controller. Investigation of the prot	Subject contents	Lectures					
physical nature. Rules and block diagram reduction. Determination of time responses of systems with a given transfer function. Preparation of frequency characteristics of Bode and Nyquist. Research on the stability of control systems based on algebraic (Hurwitz, Routh) and graphical (Nyquist) criteria. Determini of stability maright. Choice of the type and parameters of the controller. Designing and analysis of simple continuous control systems. Labs Design and analysis of combinational logic systems. Simulation and analysis of control systems in the Mallab & Simulink package. Determination of static and dynamic (time and frequency) characteristics of selected physical systems. Investigation of temperature control system with PID controller. Investigation of electromechanical servomechanism. Prerequisites and co-requisites Assessment methods and criteria Subject passing for the passing threshold Percentage of the final grade Tutorials passing 50.0% 30.0% Lecture passing 50.0% 30.0% Lecture passing 50.0% 30.0% Labs passing 50.0% 30.0% Recommended reading Basic literature 1.
