

Subject card

Subject name and code	Medical Physics, PG_00064135						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2026/2027	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	5	ECTS credits				3.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Piotr Boguś, doc.					
	Teachers						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	30	8.0	37.0	75		
Subject objectives	Getting to know the wave and quantum theory of electromagnetic radiation. Understanding the spectrum of E-M radiation with a division into the non-ionizing and ionizing range. Understanding the phenomena of interaction of E-M radiation with matter that are important in medical diagnostics. Discussion of the influence of electromagnetic fields - ionizing and non-ionizing on the human body. Learning about therapeutic methods using E-M radiation. Understanding spectroscopic methods used in atomic, molecular and structural studies of substances.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W01] has knowledge in the field of natural sciences, including mathematics, contemporary physics, chemistry, and human anatomy with physiology	The student is able to independently understand the physical basis of the phenomena important in diagnostics and therapy.			[SW1] Assessment of factual knowledge		
	[K6_U01] is able to acquire knowledge and self-studying, he/she is able to find needed information in specialist books, databases and other sources, he/she is able to integrate information and draw conclusions, he/she is able to communicate by using different technics in work and outside	The student is able to analyze information on modern physics achievements in terms of their use in the design and construction of medical equipment. He knows and understands the trends in the development of medical sciences.			[SU2] Assessment of ability to analyse information		
	[K6_U04] is able to utilize empirical, analytical, simulation, and computer-based methods to formulate and solve engineering tasks in the field of medical and mechanical engineering	The student knows the basics of the operation of modern medical equipment - diagnostic and therapeutic			[SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<p>Course content – lecture</p> <p>Physical fields - types of fields, strength, intensity, and potential. The concept of the electromagnetic field. The wave theory of the electromagnetic field. Direct and alternating currents, radio waves, microwaves, infrared radiation, visible light, ultraviolet. The use of the wave range of radiation in medical techniques. Coulter counter, thermography, electrotherapy. Influence of non-ionizing E-M radiation on the human body. Quantum (photon) theory of E-M radiation. X-rays, gamma rays. Ionizing corpuscular radiation. The use of ionizing radiation in medicine. Fundamentals of radiodiagnostics and nuclear medicine. Basics of radiotherapy. Principles of protection against ionizing radiation. Fundamentals of spectroscopic methods in the structural studies of solids.</p>								
Prerequisites and co-requisites									
Assessment methods and criteria	<table border="1" data-bbox="448 360 1487 432"> <thead> <tr> <th data-bbox="448 360 794 398">Subject passing criteria</th> <th data-bbox="794 360 1141 398">Passing threshold</th> <th data-bbox="1141 360 1487 398">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 398 794 432">Final test</td> <td data-bbox="794 398 1141 432">60.0%</td> <td data-bbox="1141 398 1487 432">100.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Final test	60.0%	100.0%
Subject passing criteria	Passing threshold	Percentage of the final grade							
Final test	60.0%	100.0%							
Recommended reading	Basic literature	<p>1. Jaroszyk, Biofizyka, PZWL, Warszawa, 2018</p> <p>2. Malicki J., Śłosarek K., Planowanie leczenia i dozymetria w radioterapii, VIA MEDICA, Gdańsk, 2018</p> <p>3. Hrynkiewicz A., Fizyczne metody diagnostyki medycznej i terapii, PWN, Warszawa 2013</p>
