GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Radio Sensor Networks and Internet of Things - Project, PG_00064149					
Field of study	Electronics and Telecommunications					
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026	
Education level	second-cycle studies		Subject group		Optional subject group Specialty subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	1		Language of instruction		English	
Semester of study	2		ECTS credits		1.0	
Learning profile	general academic profile		Assessment form		assessment	
Conducting unit	Department of Radiocommunication Systems and Networks -> Faculty of Electronics, Telecommunications and Informatics					
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Jarosław Sadowski				
	Teachers	dr hab. inż. Jarosław Sadowski				

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	15.0	0.0	15
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	15	2.0	8.0	25

Subject objectives	Verification of radio network design skills based on wireless sensor network project.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student can design radio sensor network according to defined guidelines.	[SU1] Assessment of task fulfilment
	[K7_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of advanced technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	Student can analyse radio network taking into account both the services provided by network and the maintenance, and select network elements for defined application.	[SU1] Assessment of task fulfilment

Subject contents	• Requirements specification for radio sensor network • Communication range and measurement range • Calculation of required number of nodes • Physical layer design • Data link layer • Network layer issues • Energy consumption and power supply • Radio network traffic analysis • Presentation of designed network

Prerequisites and co-requisites	Need to participate in radio sensor networks lecture (2nd semester)		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Radio sensor network project	50.0%	100.0%
