GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mathematics, PG_00064167		
Field of study	Transport		
Date of commencement of studies	October 2024	Academic year of realisation of subject	2024/2025
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	7.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Mathematics Center -> Vice-Rector for Education		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Krzysztof Radziszewski	
	Teachers	dr Adam Gnatek dr Krzysztof Radziszewski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	30.0	0.0	0.0	0.0	60

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	60	10.0	105.0	175

Subject objectives

Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_U08] able to carry out simple engineering tasks related to the construction and operation of a selected element of the transport system, select the right methods and tools	Student: defines the basic concepts of linear algebra, solves equations and inequalities, containing elementary functions, geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions, recognizes the importance of selfexpanding knowledge and take the challenge of working with a group to solve a problem.	[SU1] Assessment of task fulfilment
[K6_W01] has knowledge of mathematical analysis, algebra, calculus of probability and operational research required for describing and solving transport problems	Student: defines the basic concepts of linear algebra, solves equations and inequalities, containing elementary functions geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions, recognizes the importance of selfexpanding knowledge and take the challenge of working with a group to solve a problem.	[SW1] Assessment of factual knowledge

Subject contents	Matrices. Determinants. Inverse matrix. Rank of the matrix. Systems of linear equations: Cramers theorem, Kronecker-Capelly theorem, Gauss-Jordan elimination. Absolute value of a real number. Functions and their properties. Elementary functions: polynomials, rational functions, exponential functions, logarithmic functions, trigonometric and inverse trigonometric functions. Sequences of numbers. Limit of a sequence. Limit and continuity of a function. Differential calculus: derivative and differential of a function, Taylors formula, asymptotes of functions, maxima and minima, concavity and points of inflection. Antiderivative and the indefinite integral.
Prerequisites and co-requisites	

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Midterm colloquium	50.0%	40.0%
Written exam	50.0%	60.0%

Example issues/ example questions/ tasks being completed	1. Find the domain and the set of values of the function f(x)=arcsin(3x-2)+. Determine the inverse function of f. 2. Find the derivative of $y=4x(3x^2+5)^5$. 3. Sketch the graph of the function f(x)=x-lnx. Identify any local extrema and points of inflection. 4. Find the absolute extrema of $f(x)=4x-36x^{-1}$ on the interval [1,6]. 5. Calculate $4x^2 \ln x \, dx$. 6. Find A^{-1} if the matrix A is a 2x2 matrix of the elements $a_{ij} = 3i - j$.
