

Subject card

Subject name and code	Materials, PG_00064169											
Field of study	Transport											
Date of commencement of studies	October 2024	Academic year of realisation of subject		2024/2025								
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study							
Mode of study	Full-time studies		Mode of delivery		at the university							
Year of study	1	Language of instruction		Polish								
Semester of study	1	ECTS credits		2.0								
Learning profile	general academic profile	Assessment form		assessment								
Conducting unit	Zakład Materiałoznawstwa i Technologii Materiałowych -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology											
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Agata Lisińska-Czekaj									
	Teachers		dr hab. Agata Lisińska-Czekaj dr inż. Artur Sitko									
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM					
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30					
E-learning hours included: 0.0												
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM					
	Number of study hours	30		3.0		17.0	50					
Subject objectives	The aim of the course is to familiarize students with the basic issues of material science.											
Learning outcomes	Course outcome		Subject outcome			Method of verification						
	[K6_U08] able to carry out simple engineering tasks related to the construction and operation of a selected element of the transport system, select the right methods and tools		The student explains the principles of material selection in industry. Analyzes the main groups of selected materials, taking into account operating conditions.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject						
	[K6_W02] has knowledge of physics, mechanics, electrical engineering, hydromechanics, thermodynamics, materials science, and measurement techniques necessary to understand the phenomena occurring in transportation, as well as the principles of construction and operation of infrastructure and means of transport		The student knows the methods, techniques, tools and special materials used to construct means of transport.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation						
Subject contents	Genesis of materials science. Classification of materials and examples of division criteria: chemical composition, structure, application, manufacturing process. New technologies for implementation in the 21st century. Overview of the main groups of engineering materials: metals and their alloys, polymers, ceramic materials, composite materials - construction, manufacturing methods, properties, application. Solid structure. Basics of crystallography - elements of a spatial network, crystallographic systems. Chemical bonds and their characteristics. Structural defects and their types. Phase equilibrium systems. Steels, cast steel, cast iron - classification, designation, application. Basics of heat treatment. Steel heat treatment. Mechanical, electrical, optical, thermal and magnetic properties of materials. Material degradation (corrosion, cavitation, cracking). Biomimetic, intelligent and functional materials.											
Prerequisites and co-requisites												
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade							
	written colloquium		51.0%		50.0%

	eResources addresses	Adresy na platformie eNauczanie:

**Example issues/
example questions/
tasks being completed**

1. Classification of basic groups of materials and their characteristics and examples.
2. Defects, their types and mechanisms of creation.
3. Elements of the spatial network. Crystallographic systems.
4. Explain the concept of steel, steel classification criteria (PN), steel division.
5. Materials properties.
