

Subject card

Subject name and code	Metrology, PG_00064175						
Field of study	Transport						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Electrified Transportation -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Sławomir Judek					
	Teachers	dr hab. inż. Jacek Skibicki dr inż. Sławomir Judek					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	3.0		17.0		50
Subject objectives	Achievement by the student: knowledge in the field of modern measuring methods, in particular with regard to the transport system; skills engineering approach to the problem of metrology, and in particular the use of basic methods and procedures for the organization and operation of the measuring systems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W02] has knowledge of physics, mechanics, electrical engineering, hydromechanics, thermodynamics, materials science, and measurement techniques necessary to understand the phenomena occurring in transportation, as well as the principles of construction and operation of infrastructure and means of transport	The student defines quantities and units. Measures selected physical quantities using direct and indirect methods. Uses conventional analog, digital and oscilloscope devices. Justifies the choice of class, range and type of instrument for a measurement task. Estimates measurement uncertainty.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U06] able to plan and conduct simple laboratory and operational experiments and simulations in the area of transport; able to interpret the results and formulate conclusions	The student is able to perform a measurement procedure in accordance with the instructions, process the results, and prepare a report.			[SU2] Assessment of ability to analyse information		
Subject contents	LECTURE Quantity, unit, value, the system of units. Basic terms the theory of measurement uncertainty. Interval of uncertainty. General and specific procedures for estimating uncertainty. Measurement methods and tools. Signal processing and measurement transducers. Standards. Analog measurements. Analog-digital converters. Digital measurements. Measurements of electrical quantities. Measurements of geometrical quantities, motion parameters, forces and stresses, pressure and flow, temperature, vibration, noise. Measurements using GPS technology. Vision method 2D and 3D. LABORATORY Measurements: direct, indirect, single and multiple. Measurements of electrical quantities. Observations, imaging and oscilloscope measurements. Measurements of light intensity. Temperature measurements. Motion parameters measurements. Speed measurements. Checking the measuring equipment by comparison with the standard.						
Prerequisites and co-requisites	Basic knowledge on mathematics and physics.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium.	60.0%	60.0%
	Reports of the laboratory experiments.	60.0%	40.0%

	eResources addresses	Adresy na platformie eNauczanie: Metrologia [2024/2025], stud. I stopnia, Transport, sem. 2 - Moodle ID: 43004 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=43004	
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Determine the uncertainty in single, direct measurement with an analog instrument. 2. Determine the uncertainty in single, direct measurement with an digital instrument. 3. Determine the uncertainty in indirect single measurement. 4. Present the measurement result in accordance with applicable standards, including its uncertainty. 		
Work placement	Not applicable
