

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	, PG_00064180							
Field of study	Civil Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	5		ECTS credits			5.0		
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Engineering Structures -> Faculty of Civil and Environmental Engineering							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Aleksander Perliński					
	Teachers		dr inż. Natalia Korcz-Konkol					
			mgr inż. Arkadiusz Jenta					
			mgr inż. Paweł Pieczka					
			dr inż. Tomasz Heizig					
			dr inż. Aleksander Perliński					
			dr inż. Witold Knabe					
			dr hab. inż. Piotr Iwicki					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity Participation ir classes include plan		didactic Participation in ed in study consultation hours		Self-study		SUM	
	Number of study hours	60		0.0		0.0		60
Subject objectives	Introduction to the production and properties of steel and principles of basic steel members and joints structural design.							

Learning outcomes	Course outcome	Subject outcome	Method of verification				
	[K6_U04] Reads and prepares construction documentation (including drawings, graphic documentation in the CAD environment), efficiently uses maps as well as architectural, construction and geodetic drawings.	Can perform static calculations and dimensioning of the simple steel members and joints.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools				
	[K6_U03] Design engineering objects and details, processes and engineering systems by applying appropriate standards and methods of design.	Can design simple steel members (beams and columns) and their joints using EC3 codes.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools				
	[K6_W06] Demonstrates practical knowledge and understanding of materials, devices and tools, processes and technologies in the field of civil engineering (and their limitations).	Knows the fields of application of steel in civil engineering	[SW1] Assessment of factual knowledge				
	[K6_W03] Demonstrate knowledge and understanding of the processes, established standards and design methods in the civil engineering subject area and of their limitations.	Knows the methods relating to simple steel members and joints design	[SW3] Assessment of knowledge contained in written work and projects				
Subject contents	Lectures: History of building steel structures developement. Production and properties of steel. Steel grades and its designations. Production of steel profiles and other steel materials. Limit States in steel structures design. Bolted and riveted joints. Welded joints. Welding methods, welding defects and NDT. Steel sections classification. Tension members. Uniaxial and biaxial bending of steel. Plate girders. Axially and eccentrically compressed coluns. Joins xeULS and SLS. Bolt and welded connections. Steel beams and column joints.						
	Tutorials: Section classes. Steel tension member. Hole influence on section capacity. Axially compressed steel members. Bending of steel member. Shearing of steel member. Bolt joints. Welded joints.						
	Project: Two design exercises relating to simple joints and simple steel members						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade				
	design exercises	60.0%	20.0%				
	written lecture examination	60.0%	50.0%				
	written tutorial test	60.0%	30.0%				

Recommended reading	Basic literature	1. Praca zbiorowa: Budownictwo ogólne. Tom 5, Arkady, Warszawa 2010

Example issues/ example questions/ tasks being completed	1. ULS and SLS verification of the simply supported beam made of hot-rolled I-section.					
	2. ULS verification of the axialy compressed RHS column.					
	3. ULS verification of the overlapping bolted joint of three flat bars.					
	4. ULS verification of the welded joint between the cantilever beam and column.					
Work placement	Not applicable
