

Subject card

Subject name and code	Fundamentals of materials engineering II, PG_00058342						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Functional Materials Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Sebastian Molin					
	Teachers	dr hab. inż. Sebastian Molin mgr inż. Justyna Ignaczak					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	45	5.0	25.0	75		
Subject objectives	The aim of the course is to deepen knowledge of materials engineering and to teach them a problem-solving. The course covers advanced topics such as mechanical properties, thermal processes, design considerations, testing and quality control, and composite materials and ceramics. Students will learn to analyze and design structures and choose appropriate materials. They will also develop skills in analytical thinking, design, and the use of tools and techniques. Additionally, they will learn teamwork, communication, and cultivate attitudes of responsibility and continuous improvement.						
Learning outcomes	Course outcome	Subject outcome		Method of verification			
	[K6_K02] can work in a group taking on different roles in it	Works in a team, communicates effectively, and presents work outcomes clearly		[SK1] Assessment of group work skills [SK3] Assessment of ability to organize work			
	[K6_W13] knows the properties of materials used in the field of hydrogen energy and electromobility	Analyzes complex phenomena related to the structure and properties of engineering materials used in hydrogen energy and electromobility		[SW1] Assessment of factual knowledge			
	[K6_U01] Is able to obtain information from literature, databases and other sources, integrate them, interpret them and draw conclusions and formulate opinions; has the ability to self-educate m.in. in order to improve professional competences	Independently performs analyses and evaluates the quality of engineering materials.		[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information			

Subject contents	<p>Lecture 1: Introduction to Materials Engineering and Overview of Engineering Materials (1 hour)</p> <ul style="list-style-type: none"> • Definition of Materials Engineering and its importance • Overview of engineering materials, their properties, and applications <p>Lecture 2: Mechanical Properties of Materials (2 hours)</p> <ul style="list-style-type: none"> • Hardness, tensile and bending strength • Wear and fatigue resistance <p>Lecture 3: Thermal Processes (2 hours)</p> <ul style="list-style-type: none"> • Hardening, tempering, and normalizing • Effect of thermal processes on the structure and properties of materials <p>Lecture 4: Materials Design (3 hours)</p> <ul style="list-style-type: none"> • Effect of material properties on structural design • Material selection based on properties and applications <p>Lecture 5: Materials Testing and Quality Control (2 hours)</p> <ul style="list-style-type: none"> • Non-destructive and destructive testing • Microstructure analysis and mechanical characteristics <p>Lecture 6: Composite Materials and Ceramics (2 hours)</p> <ul style="list-style-type: none"> • Overview of composite materials and ceramics • Applications of composite materials and ceramics in different contexts <p>Lecture 7: Recap (1 hour)</p> <ul style="list-style-type: none"> • Summary of course material
