GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Functional safety in hydrogen technologies, PG_00058354						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2024		Academic year of realisation of subject	2026/2027			
Education level	first-cycle studies		Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery	at the university			
Year of study	3		Language of instruction	Polish			
Semester of study	5		ECTS credits	4.0			
Learning profile	general academic profile		Assessment form	assessment			
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marcin Śliwiński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study		SUM
	Number of study hours	60		7.0	33.0		100
Subject objectives	Providing students with advanced engineering knowledge regarding hazard identification and analysis risk assessment in hydrogen installations useful in the design of control systems taking into account functional safety requirements in hydrogen technologies.						

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W12] knows the hazards from electrical equipment, ways to reduce these hazards, basic principles of health and safety at work with electrical devices, basic principles of ergonomics	The student knows methods of verifying SIL safety integrity levels taking into account modeling results probabilistic system controlling a hydrogen installation with a given architecture.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K6_K01] is aware of the need for continuous education and self-improvement in the field of the profession of an electrician and knows the possibilities of further education	The student knows the rules of determination SIL levels (Safety Integrity Level) safety functions on based on defined matrices risk and modified risk graphs.	[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills [SK3] Assessment of ability to organize work
[K6_U12] can formulate a specification of simple engineering tasks of a practical nature related to the field of study	The student is able to design and verify the safety function safety function implemented in a control system for a hydrogen system with a user interface on a laboratory bench.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
[K6_U07] can build and analyze models of systems and systems in the field related to hydrogen devices and installations as well as control and automation systems	The student is able to make identification threats and carry out risk analyzes and assessments regarding design and use of control systems elevated hydrogen installations risk taking into account the concept of Industry 4.0 and 5.0.	[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
[K6_W14] knows and understands at an advanced level the principles, methods and techniques of programming and the principles of creating computer software or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, as well as the organization of the work of systems using computers or these devices	The student knows the possibilities of using advanced computer applications in the process of integrated functional safety and cybersecurity analyses of industrial automation and control systems (IACS) in life cycle of complex hydrogen installations.	[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects
[K6_W07] knows the basics of computer programming, digital circuits, microprocessor technology, design of simple algorithms, principles of operation of computer networks	The student is able to use knowledge of selected methods and tools to support the design process use of control systems performing safety functions.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects

Subject contents

LECTURE Risk definitions, individual and social risk. ALARP principle, risk matrix and required risk reduction. The concept of functional safety of control and security systems. Design of electrical/electronic and programmable electronic (E/E/PE) systems. Examples of functional safety solutions in industry. Threat analysis and function definition related to security. Determining the SIL safety integrity level based on risk assessment according to PN-EN 61508. DC diagnostic coverage in subsystems. SIL verification qualitative and quantitative methods. Protection and protection layers according to PN-EN 61511. Method LOPA. Design of SIS security instrument functions and the AS alarm system.

LABORATORY EXERCISES Determining the required SIL for safety-related functions. SIL level verification, design and implementation of the structure of the KooN safety system. Application drivers safety. Safety layers (BPCS, human operator and alarm system, SIS/ESD).

Prerequisites and co-requisites

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Two tests - theory/tasks	60.0%	65.0%
Practical exercises in lab,	60.0%	35.0%
