

Subject card

Subject name and code	Electrochemical power sources, PG_00058348						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2025/2026	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	4	ECTS credits				5.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Electrochemistry, Corrosion and Materials Engineering -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Artur Zieliński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		8.0		72.0	125
Subject objectives	Familiarization with the principles of operation and practical implementation of various electrochemical energy sources.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] can work individually and in a team, can communicate using various techniques in a professional environment, as well as document and analyze the results of their work, can estimate the time needed to perform the entrusted task		The student is able to translate theoretical knowledge about the thermodynamics and kinetics of electrode processes into understanding the operation of various energy sources.		[SU4] Assessment of ability to use methods and tools		
	[K6_W21] has knowledge in the field of construction, principles of operation and use of electrochemical energy sources		The student is able to carry out diagnostics and optimization of a specific variant of an energy source.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_W19] has knowledge of the properties of electrolyte solutions, electrode processes and some electrochemical processes relevant to industrial practice and the application of electrochemistry in practice		The student is able to design a medium-scale implementation of a selected electrochemical process.		[SW1] Assessment of factual knowledge		
Subject contents	Physicochemistry of electrode processes. Batteries. Supercapacitors. Fuel cells. Photovoltaic cells.						
Prerequisites and co-requisites	Electrochemistry, physical chemistry						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	exam		60.0%		50.0%		
	lab		60.0%		50.0%		

Recommended reading	Basic literature	Electrochemical Power Sources: Batteries, Fuel Cells, and Supercapacitors By Vladimir S. Bagotsky, Alexander M. Skundin and Yury M. Volfkovich (A.N. Frumkin Institute of Physical Chemistry and Electrochemistry of the Russian Academy of Science, Russia), John Wiley & Sons Inc, New Jersey, USA, 2015, 372 pages, ISBN: 978-1-118-46023-6
	Supplementary literature	Publications from the JCR list
	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	Principles of operation of fuel cells Corrosion cells	
Work placement	Not applicable	

Document generated electronically. Does not require a seal or signature.
