

Subject card

Subject name and code	Automatics and control, PG_00058359						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jacek Zawalich				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	The aim of the course is to provide theoretical and practical knowledge in the field of construction, design and servicing of automated hydrogen installations in industrial conditions using computer hardware and engineering software.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U07] can build and analyze models of systems and systems in the field related to hydrogen devices and installations as well as control and automation systems		The student is able to solve tasks in the field of design, modeling and simulation of devices and control systems for hydrogen installations. The student is comfortable using simulation programs for modeling specific objects and control systems.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K6_W16] has knowledge of the current state and the latest development trends related to the field of study.		The student knows current development trends in the power system.		[SW1] Assessment of factual knowledge		
	[K6_W14] knows and understands at an advanced level the principles, methods and techniques of programming and the principles of creating computer software or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, as well as the organization of the work of systems using computers or these devices		The student has the ability to use specific algorithms used in hydrogen technologies. The student develops programs to be implemented in PLC controllers or industrial computers.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K6_K02] can work in a group taking on different roles in it		The student is able to cooperate with other members of the laboratory group.		[SK1] Assessment of group work skills		

Subject contents	<p>LECTURE Structures of control systems for hydrogen installations and the technical processes occurring in them. Examples of industrial systems and facilities with hydrogen installations. Types of industrial measuring, actuating and control devices, their selection and basic characteristics. Methods of identification, modeling and simulation of facilities with hydrogen installations. Power system automation. Design of hydrogen storage and transport equipment. Hydrogen technologies in the chemical industry. Automation of components in hydrogen installations.</p> <p>LABORATORY Designing control and monitoring systems for automated energy systems, based on programmable controllers and a visualization system. Analysis of the operation of the selected system, technical assumptions, defining the functions implemented in the programmable controller and visualization systems, control algorithms, technical documentation.</p> <p>EXERCISES Mathematical methods for analyzing and designing automation elements and systems used in systems with hydrogen technologies. Methods of selecting the measuring and executive equipment used.</p>		
Prerequisites and co-requisites	Knowledge of the Fundamentals of Automation		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	100.0%	20.0%
	Excercise	50.0%	20.0%
	Lecture	60.0%	60.0%
