

Subject card

Subject name and code	Reliability and Diagnostics, PG_00036207						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2026/2027	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	3	Language of instruction				Polish	
Semester of study	5	ECTS credits				5.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Marcin Śliwiński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		8.0		57.0	125
Subject objectives	The student has knowledge concerning the methods and tools of reliability analysis, and diagnosis of devices and systems in automatics and robotics.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U06] has the preparation necessary to work in an industrial environment, applies the principles of occupational health and safety		The student has knowledge about indicators various reliability issues categories of industrial facilities and systems. He knows different things modeling methods probabilistic systems, especially safety related systems.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information	
	[K6_W11] knows the hazards arising from devices, installations, systems and technical systems, basic principles of occupational health and safety, taking into account the role of control and security systems in controlling automation and robotics facilities		The student has advanced knowledge of diagnostic methods for processes and installations with taking into account automation and robotics systems automation and robotics. He/she knows architecture industrial control systems ICS control and protection systems and their importance in ensuring reliability and business continuity, as well as human and environmental safety.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge	

Subject contents	<p>LECTURE</p> <p>Basic concepts and definitions of reliability theory. The failure mechanisms of technical objects. The reliability measures. Probabilistic models of elements. Distributions of random variable used in the reliability analysis. The estimation of exponential distribution parameter. Calculation of mean time to failure (MTTF) and mean time between failures (MTBF). Reliability data bases. Failure mode effect and criticality analysis (FMECA). Typical reliability structures: series, parallel and mixed. Redundancy and KooN architecture. Reliability block diagram (RDB) method. Logical and probabilistic modeling of systems. Fault tree (failure and errors) method (FT). Minimal cuts and minimal paths. Markov processes and graphs in probabilistic modeling. Functional safety of the control and protection systems. Safety integrity level (SIL) of safety-related function. Determining required SIL from a risk graph and verifying SIL based on a probabilistic model of the system. Quality and reliability management in technical systems in a life cycle. Technical diagnostics. Diagnosis of devices and systems. Reliability centered maintenance (RCM).</p> <p>TUTORIALS</p> <p>Random events and definitions of probability. Probability calculus. Venn diagrams. Independent and dependent events. Conditional probability, Bayes rule. Random variables and distributions: discrete and continuous. Examples of distributions: Bernoulli, Poisson, exponential; their parameters and characteristic values. Application of probability calculus in reliability analysis of systems of various structures.</p> <p>LABORATORY</p> <p>Analysis of the operation times to failure: functions and reliability indices. Selected distributions in random variables in reliability analysis. Parameter estimation of exponential distribution with assessment of confidence interval. Diagnostic modules available in programmable logic controllers (PLC). Calculation of measures and functions of unreliability and unavailability using the reliability block diagram method. Failure mode, effect and criticality analysis using FMECA method. Probabilistic modelling of systems using fault tree method (FT).</p>																	
Prerequisites and co-requisites	Knowledge concerning basic rules of devices functioning in technical systems. Basics of the probability calculus and statistics. Using engineering software.																	
Assessment methods and criteria	<table border="1" data-bbox="448 1128 1495 1301"> <thead> <tr> <th data-bbox="448 1128 794 1160">Subject passing criteria</th> <th data-bbox="794 1128 1141 1160">Passing threshold</th> <th data-bbox="1141 1128 1495 1160">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 1160 794 1191">Midterm tests</td> <td data-bbox="794 1160 1141 1191">60.0%</td> <td data-bbox="1141 1160 1495 1191">30.0%</td> </tr> <tr> <td data-bbox="448 1191 794 1223">Oral exam</td> <td data-bbox="794 1191 1141 1223">60.0%</td> <td data-bbox="1141 1191 1495 1223">30.0%</td> </tr> <tr> <td data-bbox="448 1223 794 1254">Written exam</td> <td data-bbox="794 1223 1141 1254">60.0%</td> <td data-bbox="1141 1223 1495 1254">20.0%</td> </tr> <tr> <td data-bbox="448 1254 794 1301">Laboratory</td> <td data-bbox="794 1254 1141 1301">60.0%</td> <td data-bbox="1141 1254 1495 1301">20.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm tests	60.0%	30.0%	Oral exam	60.0%	30.0%	Written exam	60.0%	20.0%	Laboratory	60.0%	20.0%
