

Subject card

Subject name and code	Monitoring and Measuring-and-Diagnostic Systems, PG_00038118						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Metrology and Information Systems -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Ciszewski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		26.0	75
Subject objectives	Providing knowledge about the theory of diagnostic measurements and methods and diagnostic measurement systems used in automation. Acquiring knowledge about the principles of operation of diagnostic systems and the ability to operate such systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K02] can work in a group taking on different roles in it		the student is able to work in a group, assuming various roles		[SK1] Assessment of group work skills		
	[K6_U04] has the ability to self-educate, among other things, in order to improve professional qualifications		the student has the ability to self-educate, among others: in order to improve professional qualifications		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W03] has structured knowledge of tools and methods for measuring electrical quantities, documenting their results and assessing errors and uncertainties		the student has structured knowledge of tools and methods for measuring electrical quantities, documenting their results and assessing errors and uncertainties		[SW1] Assessment of factual knowledge		
Subject contents	LECTURE General problems of diagnostics. Diagnostic economy. Vibroacoustic diagnostics. Ultrasonic diagnostics. Thermovision diagnostics. Diagnostics of electrical machines. Diagnostics of electronic modules. Building monitoring. Access control systems, levels of protection. Alarming systems. FTC systems. Sparkproof systems. The structure of diagnostic systems (management of tests, test modules, the measurement procedures). Measuring equipment (DAQ card, PXI standard, measuring instruments with standard interfaces). Measurement software (methods of programming, LabVIEW environment, SCPI language). The use of wireless transmission for remote monitoring (radiomodems, GSM). Examples of measurement and diagnostic systems (diagnostics of control valves and traction motors). LABORATORY EXERCISES Using LabVIEW software for prepare measurement procedures. Cooperation of computers with the measuring equipment. Thermovision diagnostics. Detection of electrical machine faults by vibration and current (MCSA) methods.						
Prerequisites and co-requisites	Basic electric engineering knowledge. Ability to connect electrical and electronic circuits.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Practical exercise		60.0%		40.0%		
	Midterm colloquium		60.0%		60.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Draw and discuss the structure of the test system. 2. Structure and working principle of sample-remember system. 3. Discuss the purpose of the bus transmission control IEC-625. 4. How do you determine the optimal scope of diagnosis in the enterprise. 5. The principle of operation of ultrasonic flaw detector analog. 6. Please rank the methods of mounting the accelerometers according to increasing frequency range. 7. To present and compare the basic configurations of the track analog measurement signals acquisition card . 8. What is resolution and ADC range-digital. 9. Bath curve-discuss the characteristic points 10. Discuss the construction and properties of the accelerometer of type ICP. 	
Work placement	Not applicable
