

Subject card

Subject name and code	Electrical Power Engineering, PG_00038441						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Robert Kowalak				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		7.0		48.0	100
Subject objectives	To acquaint students with the work of the power system.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	K6_K01		The student identifies the basic laws of electrical engineering in application to electrical power engineering			[SK2] Assessment of progress of work	
	K6_W09		Student identifies basic power laws.			[SW1] Assessment of factual knowledge	
	K6_U06		Student calculates current and power flows and voltage levels in the power system, uses standards in the field of short-circuit calculations in the power industry.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information	
Subject contents	The Basic knowledge of the power system structure, main devices being the circuit elements of generation, transmission and distribution of electrical energy. The construction of electrical power engineering of overhead and cable power-lines, wires and basic devices and equipment used for building the power-line. Substitute schemes of transformers and overhead and cable power-lines. Calculating the current and power distributions, losses of power, tension levels in grids of uni- and bilateral supplies and in junction grids. Short circuits in electrical Power engineering grids, courses of short circuit currents, the principles and methods of calculating the short circuit currents during symmetrical short circuits. Earthings/ groundings ? in grids with isolated stellar points of the transformers.						
Prerequisites and co-requisites	The basics of electrical engineering, the basics of power industry						
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade	
	Written exam		60.0%			60.0%	
	Midterm colloquium		60.0%			40.0%	
Recommended reading	Basic literature		Kujaszczyk Sz.: Elektroenergetyczne sieci rozdzielcze, tom I i II, Oficyna Wydawnicza PW, Warszawa 2004.				
	Supplementary literature		Kremens Z., Sobierajski M.: Analiza systemów elektroenergetycznych. WNT Warszawa 1996 Kacejko P., Machowski J.: Zwarcia w systemach elektroenergetycznych WNT Warszawa 2002				
	eResources addresses		Adresy na platformie eNauczanie:				

Example issues/ example questions/ tasks being completed	Calculation of load flow in electricity grids. Calculation of short-circuit currents in electrical power systems.
Work placement	Not applicable
