

Subject card

Subject name and code	PHYSICAL CHEMISTRY, PG_00064384								
Field of study	CHEMIA FIZYCZNA								
Date of commencement of studies			Academic year of realisation of subject			2025/	2025/2026		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of de	Mode of delivery			at the university		
Year of study			Language of instruction		Polish	Polish			
Semester of study			ECTS credits		7.0	7.0			
Learning profile			Assessmer	nt form		asses	sment		
Conducting unit	Department of Physic	cal Chemistry -	> Faculty of Ch	emistry -> Wyo	działy P	olitechr	iki Gdańskiej		
Name and surname	Subject supervisor		dr hab. inż. Piotr Bruździak						
of lecturer (lecturers)	Teachers		dr hab. inż. Piotr Bruździak						
			dr hab. Aneta Panuszko						
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	30.0	15.0	45.0	0.0		15.0	105	
	E-learning hours inclu	uded: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	105		10.0		60.0		175	
Subject objectives	The course's objectiv	es are to famili	arize students	with:					
	- the idea of a model in chemistry, its use in real systems, and its practical application;- fundamental laws of reactions and physicochemical processes;								
	- basic concepts of chemical thermodynamics;								
	- how energy and other thermodynamic processes, including intermolecular interactions, affect organic and inorganic reactions;								
	- the idea of chemical and phase equilibrium, how thermodynamics helps determine the direction of a chemical reaction, and how reaction conditions affect the efficiency and direction of the reaction.

Learning outcomes	Course outcome	Subject outcome	Method of verification	
	[K6_K03] is aware of the importance of caring for the quality and diligence of the tasks performed, being responsible for their consequences	The student demonstrates responsibility for assigned tasks by ensuring quality and diligence when performing laboratory experiments, and ensuring the reliability and factual accuracy when preparing and presenting the results of team work.	[SK1] Ocena umiejętności pracy w grupie [SK3] Ocena umiejętności organizacji pracy	
	[K6_U04] creates detailed documentation of the results obtained from the experiments carried out individually or as part of a team, analysing and interpreting the results in the form of text documents, spreadsheets, graphs, technological diagrams, multimedia presentations using correct chemical nomenclature	The student, working independently or in a team, develops, analyzes, and interprets the results of physicochemical experiments and literature studies, creating detailed documentation in the form of reports (using specialized software, e.g., LaTeX) and multimedia presentations, using correct nomenclature and mathematical formalism.	[SU2] Ocena umiejętności analizy informacji [SU4] Ocena umiejętności korzystania z metod i narzędzi [SU1] Ocena realizacji zadania	
	[K6_U02] determines the time required for the task, plans and organises the work of both the individual and the small team in such a way as to ensure that the task is completed within the set time limit	The student plans and organizes the work of a small team to solve a given problem in the field of physical chemistry, estimating the time required for individual stages and ensuring the timely completion of the task in the form of a report and presentation.	[SU1] Ocena realizacji zadania [SU3] Ocena umiejętności wykorzystania wiedzy uzyskanej w ramach przedmiotu [SU5] Ocena umiejętności zaprezentowania wyników realizacji zadania	
	[K6_W02] classifies acquired information, assessing its usefulness in solving the posed problems concerning the synthesis and analysis of selected groups of compounds, determining their physical and chemical properties, making measurements and determining the parameters of chemical reactions and processes	The student defines, interprets, and applies the fundamental concepts, laws, and functions of chemical thermodynamics to describe and predict the course of chemical processes and phase phenomena.	[SW1] Ocena wiedzy faktograficznej [SW2] Ocena wiedzy zawartej w prezentacji [SW3] Ocena wiedzy zawartej w opracowaniu tekstowym i projektowym

A lecture test follows the lecture. The student is exempt from the final exam with the average of the tests from this and the following semester. In the winter semester, failing the lecture test does not automatically result in failing the entire course. 1. The concept of a model in physical chemistry on the example of the ideal gas model: expansion of the 2. Basics of chemical thermodynamics: - basic concepts: heat, work, thermodynamic functions, heat capacity, system, reversibility of reactions and - basic thermodynamic functions: internal energy, enthalpy, entropy, free enthalpy and their relationship with chemical reaction; - principles of thermodynamics applied to chemical reactions and processes; - laws of Hess and Kirchhoff in planning chemical reactions; - thermodynamics of real systems: chemical potential, chemical affinity, activities, activity coefficient; - chemical equilibria in gas, liquid and solid phases; - thermodynamic principles of chemical reaction/process control: the influence of environmental conditions on the thermodynamic functions of the reaction and the position of the equilibrium state. 3. Phase transitions and equilibria: - basic relationships regulating phase transitions in ideal and real systems; - influence of external factors on phase transformations; relationship of thermodynamics with phase transitions; - phase equilibria in one- and two-component systems; 4. Reactions in solutions:- basic concepts of solutions; - basic calculations of chemical equilibria in solutions; - reaction thermodynamics calculated using quantum mechanics methods; - thermodynamics of dissolution and crystallization processes. 5. Fundamentals of thermodynamics of reactions and irreversible processes: - local thermodynamic description; sources of entropy of irreversible processes;

	which they develop with the help of the teacher, and present the results in the form of a report (pdf format) and an oral presentation.				
	Schedule of seminar classes:				
	(1h) Initial meeting to present the principles of group work, define the project's goals and divide tasks between group members.				
	(2h) Introduction to scientific spelling and text formatting, including a discussion of the basic rules for the structure of a scientific article.				
	(2h) The use of LaTeX, Overleaf and library databases of publications as tools to develop a scientific report.				
	(6h) Development (in the form of a report) of a given problem related to the thermodynamics of chemical reactions and processes, containing the following main elements:				
	- physicochemical basis of the problem;				
	 presentation of the method of processing the received data; discussion of the results in a descriptive and graphical form; discussing the problems that arose during the work on the project. (4h) Presentation of the results of the work in the form of a 15-minute presentation (+10-minute discuss and a joint discussion of the most important problems that arose during the work on the problems. 				
Prerequisites and co-requisites	Preceding subjects: mathematics (including calculus), physics, general	chemistry.		
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade		
and criteria	1 final lecture test (lecture)	60.0%	0.0%		
	final report and presentation	60.0%	10.0%		
	(seminars)				
	2 tests (exercises)	60.0%	50.0%		
	6 tests and reports (laboratory)	60.0%	40.0%		
Recommended reading	Basic literature	 Chemia fizyczna, P. W. Atkins, PWN. Chemia fizyczna, 1.Podstawy fenomenologiczne, K. Pigoń i Z. Ruziewicz, PWN. Chemia fizyczna. Ćwiczenia laboratoryjne. Red. H. Strzelecki i W. Grzybkowski, Wydawnictwo PG. 			
	Supplementary literature	Chemia fizyczna, Część I, W. Libuś, Wydawnictwo PG. Chemia fizyczna. Zbiór zadań z rozwiązaniami, P.W. Atkins, C.A. Trapp, M.P. Cady, C. Giunta, PWN. Chemia fizyczna. Laboratorium fizykochemiczne, L. Komorowski, A. Olszowski, PWN.			
		and a list of scientific papers form	ing the basis of the seminar project.

	eResources addresses				
Example issues/ example questions/ tasks being completed	LECTURE:				
tasks being completed	The entropy change of the water freezing process is negative. Doesn't this fact contradict the second law of thermodynamics? Justify your answer.				
	Hess's law is a consequence of some general thermodynamic laws. State what the rules are.				
	3. The phase equilibrium line between phase a and phase b in the p-T system has a negative and steep slope. List and justify all possible reasons for this fact.				
	EXERCISES:				
	Hess's law and Kirchhoff's law - determination of thermal effects of reactions.				
	2. Phase transitions in one- and two-component systems.				
	Reaction equilibrium constant - relationship with reaction thermodynamics and dependence on temperature.				
	4. Example task: Calculate Q, W, U, and H in the adiabatic process of expanding 1 mole of a monatomic ideal gas with an initial temperature of 25oC and a volume of 2 dm3 to a final volume of 3 dm3: a) reversibly, b) against a constant external pressure of 4.5 bars.				
	LAB:				
	How can the vapor pressure of a pure substance be measured using an isoteniscope?				
	2. Methods of determining the heat capacity of a calorimeter.				
	3. Suggest a method for determining the heat of dissolution of a substance.				
	SEMINAR:				
	The Benesi-Hildebrand equation in determining the equilibrium constant of a reaction.				
	Determination of thermodynamic functions and verification of hypotheses regarding the chemical reaction mechanism using DSC differential calorimetry.				
	Colligative quantities in studies of macromolecular compounds.				
Practical activites within the subject	Not applicable
