Subject objectives	The program aims to build students' knowledge about the possibilities of using computer programs to create design documentation and graphical presentations and develop basic skills in this area.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U01] is able to use the experience gained during studies to critically analyze the conditions and formulate conclusions for design in an interdisciplinary context	He/she has practical skills in creating and editing vector graphics and raster images. He/she can select the suitable computer tools and the adequate graphics type for the design task.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_U03] is able to prepare a graphic, written and oral presentation of your own design concepts in the field of architecture and urban planning, meeting the requirements of a professional record appropriate for architectural and urban design	A student uses graphic computer programs to create models and drawings of three-dimensional objects in order to present the results of the design process.			[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment
