Subject objectives	The aim of the course is: - introduction of concepts defining the space - explanation of relationships taking place in space - spatial and graphic interpretation of definitions defining spatial relations.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] is able to design an architectural object or a simple urban complex that meets the aesthetic and technical requirements		- makes drawings showing the designed form - makes a spatial model		[SU2] Assessment of ability to analyse information		
	[K6_U03] is able to prepare a graphic, written and oral presentation of your own design concepts in the field of architecture and urban planning, meeting the requirements of a professional record appropriate for architectural and urban design		- prepares a presentation and presents his work in 2-D and 3-D - selects the size of the boards to the presented drawings - composes boards on which the designed object is presented		[SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	Design: Practical knowledge of the basic concepts and issues of architectural composition. Creating flat and spatial compositions illustrating relationships that take place in space. Transformation of a simple spatial form and save its as a drawing.
