

Subject card

Subject name and code	Structural Design and Mechanics I, PG_00055579						
Field of study	Architecture						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Technical Fundamentals of Architecture Design -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jarosław Przewłócki				
	Teachers		prof. dr hab. inż. Jarosław Przewłócki				
			dr inż. arch. Michał Kwasek				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Understanding the behaviour of rod systems and arrangement of their statical schemes, solving statically determinate beams, frames and trusses.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design		the student knows and understands construction, building and engineering problems related to the design of buildings; principles, solutions, structures in the field of structural design and mechanics		[SW1] Assessment of factual knowledge		
	[K6_U04] is able to use analytical methods to formulate and solve project tasks		the student is able to use analytical methods to formulate and solve design tasks in the field of structural design and mechanics		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		
Subject contents	<p>LECTURES: Introduction to the subject, structural elements. Elementary statics: scalars and vectors, principles of statics, static moment of force relative to the a point, pair of forces, reduction of plane force systems, equilibrium conditions. Impacts at construction, concentrated force, continuous load, concentrated moment. Schemes of bar systems, nodes and supports. Basic assumption of structural theory. Internal forces in statically determinate bar systems, relation between internal forces and external loading. Simple beams: free-ends beams, fixe beams, free-ends beams with bracket. Frame systems: beams with broken axis, three-hinged frames. Arch systems: internal forces in curved bars, pressure line. Plane truss systems, node counterpoise method, cross-section method. Built-up systems (jointed continuous beams, frame and truss systems, frame-truss systems). Variable loads (utilities): influence lines, loading of influence lines, extremal loading of influence lines. Envelopes of internal forces, load combination.</p> <p>EXERCISES: Elementary statics. Reactions of simple beams. Internal forces in simple beams. Jointed continuous beams. Beams with broken axis. Three-hinged frames. Arch systems. Truss systems. Frame-truss systems. Influence lines. Extremal values of reactions and bending moments.</p>						
Prerequisites and co-requisites							

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	55.0%	100.0%
Recommended reading	Basic literature	Kolendowicz T.: Mechanika budowli dla architektów. Arkady, Warszawa, 1993. Przewłócki J., Górski J.: Podstawy mechaniki budowli. Arkady, Warszawa, 2012.	
	Supplementary literature	Chudzikiewicz A.: Statyka budowli. Część I i II. PWN, Warszawa, 1973. Pyrak S., Szulborski K.: Mechanika konstrukcji. Przykłady obliczeń. Arkady, Warszawa, 2001.	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Draw up diagrams of internal forces N, V and M in the simply supported beam. Determine the longitudinal forces in marked truss rods. Determine the extreme values of the reaction (bending moment) under the given AC and DC loads.		
Work placement	Not applicable
