

## Subject card

Subject name and code	ENGINEERING SURVEYING and GIS APPLICATIONS, PG_00038234						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Anna Sobieraj-Żłobińska					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	45	5.0		25.0		75
Subject objectives	To get familiar with modern measuring methods used in engineering surveying. Get to know the elementary knowledge of photogrammetry and remote sensing and GIS.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W12] has knowledge of contemporary and useful principles on data acquisition, filtration, processing and analysis	The student has knowledge on the methods and instruments used in geodesy and civil engineering. He knows local and global horizontal and vertical reference systems. Student has knowledge about coordinate systems, their transformation and projections. He has elementary knowledge on GNSS (Global Navigation Satellite System). Student has elementary knowledge on laser scanning, photogrammetry and remote sensing. He knows the basics of GIS Geographic Information System. He can acquire, process and analyze data.			[SW1] Assessment of factual knowledge		
	[K7_U05] can rely on scientific sources for modern methods and technologies, and propose trends in the development of methods and rules for acquiring, filtering, processing and analyzing data	Student knows how to read and interpret the content of survey maps, orthophotos, aerial and satellite imagery developed in different technologies, can make a thematic map based on databases.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
Subject contents	Introduction to methods and instrument used in surveying. Advanced geodetic surveying in civil engineering. Local, global, horizontal and vertical datum systems. Coordinates, projections and transformation. Global Navigation Satellite Systems (GPS, Glonass, Galileo): architecture, functions, measurement techniques, geodetic receivers and its application in engineering surveying. Active Geodetic Network ASG-EUPOS: architecture, networking structure, functions, services, dataprocessing. Laser Scanning: idea, measurements, instruments, data processing. Fundamentals of GIS.						
Prerequisites and co-requisites	Elementary knowledge on mathematics and physics.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	60.0%	30.0%
	report	60.0%	10.0%
	practical task	60.0%	25.0%
	project	60.0%	35.0%
