

Subject card

Subject name and code	Chemistry, PG_00055862							
Field of study	Power Engineering							
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	1		Language of instruction			Polish		
Semester of study	1		ECTS credits			2.0		
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering							
Name and surname	Subject supervisor	dr inż. Małgorzata Szopińska						
of lecturer (lecturers)	Teachers		dr inż. Małgorzata Szopińska					
			dr inż. Agnieszka Kalinowska					
			dr inż. Filip Gamoń					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0		30
	E-learning hours inclu	uded: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		2.0		18.0		50
Subject objectives	Introducing students to energy. Provision of kincluding titration and electrochemistry, preshardness, degassing desulphurization.	knowledge abo lysis, as well a senting issues	ut laboratory v s instrumental related to boile	essels and equ methods of and er water, includi	ipment. alysis. L ing: basi	Introdu earning c conc	ction to resea the basics o epts, parame	arch analytics, f ters, water

	Course outcome	Subject outcome	Method of verification				
	[K6_W02] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment	The student is able to apply the acquired knowledge of physics and chemistry, fluid mechanics and general mechanics to perform laboratory tasks (including computational tasks), which are the basis in the energy sector.	[SW1] Assessment of factual knowledge				
	[K6_K01] is aware of the need for training and self-improvement in the profession of energy and the possibility of further education; can think and act in a creative and entrepreneurial manner; can define priorities for the implementation of an individual or group task	The student's knowledge includes knowledge about self-improvement and education in the field of energy. He knows the basic laws of chemistry used in energy and is able to use them in practice.	[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work				
	[K6_U10] can use correctly selected methods and measuring devices for determination of basic parameters during the water treatment process and wastewater treatment control; can perform basic laboratory tests leading to the assessment of water quality, pollutant load in wastewater	The student has knowledge of research equipment used in chemistry, knows the techniques of determining chemical compounds and is able to perform simple determinations independently in a variety of matrices and has knowledge of analytical instrumental methods used in the power industry. Based on the research, the student is able to assess the state of the environment, including the degree of its transformation as a result of the accumulation of pollutants, e.g. in sewage.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment				
Subject contents	Basic chemical concepts, structure of the atom, systematics and laws of chemistry, division and transformation of chemical reactions, phase transformations and their importance in energy, division of chemical elements, vessels and laboratory equipment, basic analytical concepts, titration analysis, instrumental methods of analysis, dispersion systems, colloids, emulsions, basics of electrochemistry, polymers and plastics, boiler water - basic concepts, parameters, water hardness, degassing, basics of metal corrosion, flue gas desulphurization.
